Wertz,2012-12-06 Roger D Werking Head Attitude Determination and Control Section National Aeronautics and Space Administration Goddard Space Flight Center Extensive work has been done for many years in the areas of attitude determination attitude prediction and attitude control During this time it has been difficult to obtain reference material that provided a comprehensive overview of attitude support activities This lack of reference material has made it difficult for those not intimately involved in attitude functions to become acquainted with the ideas and activities which are essential to understanding the various aspects of spacecraft attitude support As a result I felt the need for a document which could be used by a variety of persons to obtain an understanding of the work which has been done in support of spacecraft attitude objectives It is believed that this book prepared by the Computer Sciences Corporation under the able direction of Dr James Wertz provides this type of reference This book can serve as a reference for individuals involved in mission planning attitude determination and attitude dynamics an introductory textbook for students and professionals starting in this field an information source for experimenters or others involved in spacecraft related work who need information on spacecraft orientation and how it is determined but who have neither the time nor the resources to pursue the varied literature on this subject and a tool for encouraging those who could expand this discipline to do so because much remains to be done to satisfy future needs      **The Beach Book** Carl Hobbs,2012-06-12 Waves and tides wind and storms sea level rise and shore erosion these are the forces that shape our beaches and beach lovers of all stripes can benefit from learning more about how these coastal processes work With animation and clarity The Beach Book tells sunbathers why beaches widen and narrow and helps boaters and anglers understand why tidal inlets migrate It gives home buyers insight into erosion rates and provides natural resource managers and interested citizens with rich information on beach nourishment and coastal zone development And for all of us concerned about the long term health of our beaches it outlines the latest scientific information on sea level rise and introduces ways to combat not only the erosion of beaches but also the decline of other coastal habitats The more we learn about coastline formation and maintenance Carl Hobbs argues the better we can appreciate and cultivate our shores Informed by the latest research and infused with a passion for its subject The Beach Book provides a wide ranging introduction to the shore and all of us who love the beach and its associated environments will find it timely and useful
