The Tropical Rain Forest Marius Jacobs,2012-12-06 In recent years tropical forests have received more attention and have been the subject of greater environmental concern than any other kind of vegetation There is an increasing public awareness of the importance of these forests not only as a diminishing source of countless products used by mankind nor for their effects on soil stabilization and climate but as unrivalled sources of what today we call biodiversity Threats to the continued existence of the forests represent threats to tens of thousands of species of organisms both plants and animals It is all the more surprising therefore that there have been no major scientific accounts published in recent years since the classic handbook by Paul W Richards *The Tropical Rain Forest* in 1952 Some excellent popular accounts of tropical rain forests have been published including Paul Richards s *The Life of the Jungle* and Catherine Caulfield s *In the Rainforest and Jungles* edited by Edward Ayensu There have been numerous often conflicting assessments of the rate of conversion of tropical forests to other uses and explanations of the underlying causes and in 1978 UNESCO UNEPI FAO published a massive report *The Tropical Rain Forest* which although full of useful information is highly selective and does not fully survey the enormous diversity of the forests

**Dispersal Centres of Spingidae (Lepidoptera) in the Neotropical Region** H. Schreiber,2012-12-06 The term dispersal centre literally refers to the place from which a dispersal process started However it also implies the location of a centre of diversity frequently even a recent one as well as the location of a preservation centre or refuge during regressive phases in less remoted periods of earth s history and that of a possible speciation centre The latter may have been the place of differentiation of subspecies or species provided that the isolation period has been sufficiently long The term deliberately brings the dynamics to prominence which is inherent in the process of dispersal This dynamics is neither properly recognized when considering ranges whose recent structures more or less force us to consider them as static entities DE LATTIN 1967 p 16

nor adequately taken into account by systematic typology Yet it is in fact the change that takes place in a range which is of great significance in evolutionary genetics In the case of range regressions which may lead to a diminution or rupture of the range pattern according to the pressure of the endogenous or exogenous triggering factors subsequently arising distribution obstacles may result in a geographical isolation of partial populations or population parts Their sufficiently long spatial and reproductive isolation and the allele loss resulting from the change of the population size promote a divergent development

The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and suspenseful novel that will keep you wondering until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
