Density Standards for Field Compaction of Granular Bases and Subbases Transportation research board,1976

Density Standards for Field Compaction of Granular Bases and Subbases J. P. Roston,Freddy L. Roberts,William Baron,1976-01-01 This report presents the findings of a study to evaluate current procedures and criteria for the setting of density standards to control compaction during construction of granular base and subbase courses and to develop more appropriate procedures and criteria An extensive laboratory test program was carried out comprising seven methods of compaction and four materials under various moisture conditions and gradations The aggregates tested were a granite gneiss a crushed gravel a dolomitic limestone and a basalt A prototype field compact testing program was conducted using the same four aggregates Procedures and criteria are proposed for use by highway agencies *An Evaluation of a Proposed Test Method for Determining the Maximum Dry Density of Dense Graded Aggregate* FL. Roberts,1976 A unique compaction test method similar to ASTM Test for Moisture Density Relations of Soils Using 10 lb 4 5 kg Rammer and 18 in 457 mm Drop D 1557 70 was developed and evaluated in the course of a National Cooperative Highway Research Program study of density standards for field compaction of granular base and subbases conducted at Clemson University The new test method called the Marshall Hammer Compaction Test utilizes a standard 1 30 ft³ 944 64 cm³ mold as specified in ASTM Test D 1557 70 Method C but the 10 lb 4 53 kg Marshall hammer is substituted for the 10 lb 4 53 kg Proctor hammer Also forty blows for each of the five layers are used to provide a total compaction effort of 90 000 ft lbs ft³ 4362 6 kN m m³ for the new test
