Barrages Engineering Design And Environmental Impacts:

Barrages Neville Burt, Jacqueline Watts, 1996-09-20 The very word barrages is evocative In the context of tidal waters it conjures up pictures of massive structures and environmental change Barrages represent the engineer's success where King Canute failed to stop the tide coming in They are hardly a new concept as man has for centuries tried to harness tidal power to drive his machinery but a new breed of barrage is emerging aimed at regenerating depressed urban areas One of the primary aims of such schemes has been to drown unsightly mud flats If you happen to be a wading bird used to enjoying the worms that live in intertidal mud flats you may not share that perspective Indeed many people today tend to side with the birds fish and other ecological wonders and often find themselves in conflict with the promoters of a barrage scheme How far are their fears justified Are the negative impacts as bad as some people have predicted or even worse How accurately can the impacts be predicted by scientific methods Can the barrage be designed and its operation controlled to mitigate any negative effects as well as to optimise its primary objective These issues are addressed in this book by authors drawing on their experience of research and practical experience

Guidelines for the Assessment and Planning of Estuarine Barrages Neville Burt, Andrew Rees, 2001 Based on research commissioned by DETR and the Environment Agency

Guidelines for the assessment and planning of estuarine barrages presents guidance on the planning design construction and operation of estuarine barrages The development and operation of barrages have the potential to have a considerable impact on the existing estuarine environment It is essential therefore that all environmental costs are taken into account and that alternative options that may satisfy the aspirations of the developer are fully considered

Advances in Invertebrates and Fish Telemetry Jean Paul Lagardere, Marie-Laure Begout Anras, Guy Claireaux, 2012-12-06 This volume provides a selection of the most significant papers presented at the Second Conference on Fish Telemetry in Europe in La Rochelle France in April 1997 The conference was attended by 100 scientists from 18 countries The contributions are grouped under the following headings Methodology and New Developments Tagging Procedures Behavioural and Physiological Ecology Fish Migration Stock Management and Conservation Particular emphasis was put on tag miniaturisation multiple functions and sampling strategies Papers concerned the effects of tags on fish for consolidating behavioural or original physiological investigations noticeably more open to the marine environment Methods were essentially applied to study the relationships between fish and their natural environment Besides providing up to date information on the state of fish telemetry the book illustrates the increase in spatial and temporal scales and the number of tracked fish which gives a statistical basis for field study in behavioural ecology

Proceedings of the Institution of Civil Engineers, 2003 *World Water Congress Part 3* W. O. K. Grabow, 2001 Selected Proceedings of the 1st IWA World Water Congress held in Paris France 3-7 July 2000 The World Water Congress held in Paris in July 2000 was the first under the banner of the International Water Association formed by the merger of the International Association on Water Quality and the International Water Services Association The success of

The Rivers of Wales D. Dudley Williams, Catherine Duigan, 2009 Situated on the western margin of Europe Wales has been moulded by the erosional and depositional power of its fresh waters by virtue of high rainfall interacting with extensive regions of bedrock and post Ice Age glacial debris The result is a still evolving landscape rich in upland bogs springs mountain streams and lakes rivers running through deeply eroded valleys and large lowland rivers meandering across wide floodplains into estuaries and the sea Subsequent chapters bring together for the first time the combined expertise of a group of scientists whose intimate and collective knowledge of the Welsh aquatic landscape is unparalleled The authors begin by describing the knowledge base of these important habitats emphasising the structure and role of their plant animal and microbial communities Upon this are built chapters that review the pioneering role of Welsh river studies in the development of running water science and very poignantly assess the high degree of human alteration of the principality's riverine ecosystems These are followed by chapters that discuss the need for further scientific study management conservation restoration and education so that future impacts on Welsh waters may be understood and minimised Throughout the book flows the underlying theme that there has been and always will be a close link between water resources and the development of Welsh society Publisher's description
