Statistics Applied to Clinical Trials Ton J. Cleophas,A.H. Zwinderman,Toine F. Cleophas,Eugene P. Cleophas,2008-12-16 In clinical medicine appropriate statistics has become indispensable to evaluate treatment effects Randomized controlled trials are currently the only trials that truly provide evidence based medicine Evidence based medicine has become crucial to optimal treatment of patients We can define randomized controlled trials by using Christopher J Bulpitt s definition a carefully and ethically designed experiment which includes the provision of adequate and appropriate controls by a process of randomization so that precisely framed questions can be answered The answers given by randomized controlled trials constitute at present the way how patients should be clinically managed In the setup of such randomized trial one of the most important issues is the statistical basis The randomized trial will never work when the statistical grounds and analyses have not been clearly defined beforehand All endpoints should be clearly defined in order to perform appropriate power calculations Based on these power calculations the exact number of available patients can be calculated in order to have a sufficient quantity of individuals to have the predefined questions answered Therefore every clinical physician should be capable to understand the statistical basis of well performed clinical trials It is therefore a great pleasure that Drs T J Cleophas A H Zwinderman and T F Cleophas have published a book on statistical analysis of clinical trials The book entitled Statistics Applied to Clinical Trials is clearly written and makes complex issues in statistical analysis transparent
