Lei Huang

Close To The Earth:

Near-Earth Objects Donald K. Yeomans, 2016-09-26 An insider's look at the science of near Earth comets and asteroids. Of all the natural disasters that could befall us, only an Earth impact by a large comet or asteroid has the potential to end civilization in a single blow. Yet these near Earth objects also offer tantalizing clues to our solar system's origins and someday could even serve as stepping stones for space exploration. In this book, Donald Yeomans introduces readers to the science of near Earth objects, its history, applications, and ongoing quest to find near Earth objects before they find us. In its course around the sun, the Earth passes through a veritable shooting gallery of millions of nearby comets and asteroids. One such asteroid is thought to have plunged into our planet sixty-five million years ago, triggering a global catastrophe that killed off the dinosaurs. Yeomans provides an up-to-date and accessible guide for understanding the threats posed by near Earth objects and also explains how early collisions with them delivered the ingredients that made life on Earth possible. He shows how later impacts spurred evolution, allowing only the most adaptable species to thrive. In fact, we humans may owe our very existence to objects that struck our planet. Yeomans takes readers behind the scenes of today's efforts to find, track, and study near Earth objects. He shows how the same comets and asteroids most likely to collide with us could also be mined for precious natural resources like water and oxygen and used as watering holes and fueling stations for expeditions to Mars and the outermost reaches of our solar system.

Exploration of Near Earth Objects Committee on Planetary and Lunar Exploration, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Division on Engineering and Physical Sciences, National Research Council, 1998-05-18. Comets and asteroids are, in some sense, the fossils of the solar system. They have avoided most of the drastic physical processing that shaped the planets and thus represent more closely the properties of the primordial solar nebula. What processing has taken place is itself of interest in decoding the history of our solar neighborhood. Near Earth objects are also of interest because one or more large ones have been blamed for the rare but devastating events that caused mass extinctions of species on our planet, as attested by recent excitement over the impending passage of asteroid 1997 XF11. The comets and asteroids whose orbits bring them close to Earth are clearly the most accessible to detailed investigation, both from the ground and from spacecraft. When nature kindly delivers the occasional asteroid to the surface of Earth as a meteorite, we can scrutinize it closely in the laboratory. A great deal of information about primordial chemical composition and primitive processes has been gleaned from such objects. This report reviews the current state of research on near Earth objects and considers future directions. Attention is paid to the important interplay between ground-based investigations and spaceborne observation or sample collection and return. This is particularly timely since one U.S. spacecraft is already on its way to rendezvous with a near Earth object, and two others, plus a Japanese mission, are being readied for launch. In addition to scientific issues, the report considers technologies that would enable further advances in capability and points out the possibilities for including near Earth objects in any future expansion.

of human exploration beyond low Earth orbit **The Threat of Near-earth Asteroids** United States. Congress. House. Committee on Science. Subcommittee on Space and Aeronautics,2003 *Near-Earth Objects (NEOS)* United States. Congress. House. Committee on Science and Technology (2007). Subcommittee on Space and Aeronautics,2008 **Schnell Astronomy** Albert Frederick Schnell,1909 The Sun: Ruler, Fire, Light, and Life of the Planetary System Richard Anthony Proctor,1872 **The Child's Book of Nature** Worthington Hooker,1877 Hazards Due to Comets and Asteroids Tom Gehrels,2021-11-30 In 1993 the U S Department of Defense declassified information dealing with frequent explosions in the upper atmosphere caused by meteoric impact It is estimated that impacts have occurred of a magnitude equivalent to the atomic bomb detonated at Hiroshima Not all such space voyagers meet their end in the atmosphere however huge craters attest to the bombardment of earth over millions of years and a major impact may have resulted in the extinction of dinosaurs An impact in Siberia near the beginning of this century proves that such events are not confined to geologic time Hazards Due to Comets and Asteroids marks a significant step in the attempt to come to grips with the threats posed by such phenomena It brings together more than one hundred scientists from around the world who draw on observational and theoretical research to focus on the technical problems related to all aspects of dealing with these hazards searching for and identifying hazardous comets and asteroids describing their statistics and characteristics intercepting and altering the orbits of dangerous objects and applying existent technologies rocket boosters rendezvous and soft landing techniques instrumentation to such missions The book considers defensive options for diverting or disrupting an approaching body including solar sails kinetic energy impacts nuclear explosives robotic mass drivers and various propulsion systems A cataclysmic impact posing a threat to life on Earth is a possibility that tomorrow s technology is capable of averting This book examines in depth the reality of the threat and proposes practical measures that can be initiated now should we ever need to deal with it The Guide to Nature ,1924 *Good words, ed. by N.
