Detecting and Creating Art Forgeries with Artificial Intelligence Charlotte Helena Hoppe, 2025-11-19 Art forgeries have a long history but never before have museums dealers and collectors faced such fundamental challenges as in the age of artificial intelligence The boundaries between original and imitation between human creativity and algorithmically generated simulation are blurring at a rapid pace Modern AI systems can imitate styles falsify digital documents and create plausible new works in the style of old masters At the same time these same technologies are enabling for the first time precise analyses that reveal fakes before they reach the market This book examines this dual movement the new possibilities for

deception and the equally new tools for detection It combines classical art forensics with computer vision deep learning and digital provenance research It shows how archives can be manipulated how deepfakes can undermine art historical narratives and how AI supported authentication is transforming the foundations of museum expertise At the same time it develops perspectives for a more transparent technically supported art market of the future The result is an interdisciplinary work that combines art history forensics technology law and economics It is aimed at anyone who wants to understand how the art world is changing in the 21st century This book not only shows how forgeries are created and exposed but also opens up a debate about authenticity in an age when truth itself is up for negotiation Bremen University Press has published over 5 500 specialist books in various languages since 2005 November 2025

Machine Learning The Game Show John Giordani,2025-03-16 Machine Learning The Game Show isn't your typical tech manual it's a playful exploration of artificial intelligence through the vibrant lens of competition humor and human ingenuity Authored by Dr John Giordani the book portrays AI not merely as a technological marvel but as a contestant in the game show of life competing alongside and against humans Through lively storytelling and relatable examples the book demystifies complex AI concepts offering readers a comfortable yet intellectually stimulating way to engage with machine learning The premise revolves around how humans and AI interact compete and collaborate emphasizing humor and creativity as vital tools in navigating the brave new digital landscape Dr Giordani wrote this book to foster a greater public understanding and comfort level with AI highlighting the humorous human side of technology He advocates embracing AI as a creative partner rather than fearing it as a competitive threat Through entertaining scenarios and anecdotes he encourages readers to appreciate the quirks and capabilities of AI while celebrating uniquely human traits like intuition humor and adaptability
