Clusters Of Galaxies:

Clusters and Superclusters of Galaxies A.C. Fabian,2012-12-06 Clusters and superclusters of galaxies are the largest objects in the Universe They have been the subject of intense observational studies at a variety of wavelengths from radio to X ray which has provoked much theoretical debate and advanced our understanding of the recent evolution of the large scale structure of the Universe The current status of the subject is reviewed in this volume by active researchers who lectured at a NATO Advanced Study Institute held in Cambridge England in July 1991 Much of the material is presented in a pedagogical manner and will appeal to scientists astronomers and graduate students interested in extragalactic astronomy *Merging Processes in Galaxy Clusters* L. Feretti,I.M. Gioia,G. Giovannini,2006-04-18 Mergers are the mechanisms by which galaxy clusters are assembled through the hierarchical growth of smaller clusters and groups Major cluster mergers are the most energetic events in the Universe since the Big Bang Many of the observed properties of clusters depend on the physics of the merging process These include substructure shock intra cluster plasma temperature and entropy structure mixing of heavy elements within the intra cluster medium acceleration of high energy particles formation of radio halos and the effects on the galaxy radio emission This book reviews our current understanding of cluster merging from an observational and theoretical perspective and is appropriate for both graduate students and researchers in the field **Clusters of Galaxies: Physics**

and Cosmology Andrei M. Bykov,Jelle Kaastra,Marcus Brüggen,Maxim Markevitch,Maurizio Falanga,Frederik B. S. Paerels,2019-10-17 Clusters of galaxies are large assemblies of galaxies hot gas and dark matter bound together by gravity Galaxy clusters are now one of the most important cosmological probes to test the standard cosmological models Constraints on the Dark Energy equation of state from the cluster number density measurements deviations from the Gaussian perturbation models the Sunyaev Zeldovich effect as well as the dark matter proles are among the issues to be studied with clusters The baryonic composition of clusters is dominated by hot gas that is in quasi hydrostatic equilibrium within the dark matter dominated gravitational potential well of the cluster The hot gas is visible through spatially extended thermal X ray emission and it has been studied extensively both for assessing its physical properties and as a tracer of the large scale structure of the Universe Magnetic fields as well as a number of non thermal plasma processes play a role in clusters of galaxies as we observe from radioastronomical observations The goal of this volume is to review these processes and to investigate how they are interlinked Overall these papers provide a timely and comprehensive review of the multi wavelength observations and theoretical understanding of clusters of galaxies in the cosmological context Thus the volume will be particularly useful to postgraduate students and researchers active in various areas of astrophysics and space science Originally published in Space Science Reviews in the Topical Collection Clusters of Galaxies Physics and Cosmology

Clusters of Galaxies F. Durret,Florence Durret,Alain Mazure,J. Thanh Van Tran,1994 **A Pan-Chromatic View of Clusters of Galaxies and the Large-Scale Structure** Manolis Plionis,O. López-Cruz,D. Hughes,2008-02-29 The reviews

presented in this volume cover a huge range of cluster of galaxies topics Readers will find the book essential reading on subjects such as the physics of the ICM gas the internal cluster dynamics and the detection of clusters using different observational techniques The expert chapter authors also cover the huge advances being made in analytical or numerical modeling of clusters weak and strong lensing effects and the large scale structure as traced by clusters **Webb Society Deep-sky Observer's Handbook: Clusters of galaxies** Webb Society,1979 **Clusters of Galaxies: Volume 3, Carnegie Observatories Astrophysics Series** John S. Mulchaey,Alan Dressler,Augustus Oemler,2004-09-23 Clusters of galaxies are the largest and most massive collapsed systems in the Universe and as such they are valuable probes of cosmological structure and galaxy evolution The advent of extensive galaxy surveys large ground based facilities space based missions such as HST Chandra and XMM Newton and detailed numerical simulations makes a particularly exciting time to be involved in this field The review papers in this volume span a comprehensive range of research in this area including theoretical expectations for the growth of structure survey techniques to identify clusters metal production and the intracluster medium galaxy evolution in the cluster environment and group cluster connections With contributions from leading authorities in the field this volume is appropriate both as an introduction to this topic for physics and astronomy graduate students and as a reference source for professional research astronomers **Clusters of Galaxies: Beyond the Thermal View** Jelle Kaastra,2008-05-01 The existence of soft excess emission originating from clusters of galaxies defined as emission detected below 1 keV in excess over the usual thermal emission from hot intracluster gas hereafter the ICM has been claimed since 1996 Soft excesses are particularly important to detect because they may at least partly be due to thermal emission from the Warm Hot Intergalactic Medium where as much as half of the baryons of the Universe could be They are therefore of fundamental cosmological importance Soft excess emission has been observed and has also given rise to controversy in a number of clusters mainly raising the following questions 1 Do clusters really show a soft excess 2 If so from what spatial regions of the cluster does the soft excess originate 3 Is this excess emission thermal originating from warm hot intergalactic gas at temperatures of 10 K or non thermal in which case several emission mechanisms have been proposed Interestingly some of the non thermal mechanisms suggested to account for soft excess emission can also explain the hard X ray emission detected in some clusters for example by RXTE and BeppoSAX also see Petrosian et al 2008 Chap 10 this issue Rephaeli et al 2008 Chap 5 this issue Cooling Flows in Clusters and Galaxies A.C. Fabian,2012-12-06 X ray astronomers discovered the diffuse gas in clusters of galaxies about 20 years ago It was later realized that the central gas density in some clusters and in elliptical galaxies is so high that radiative cooling is a significant energy loss The cooling time of the gas decreases rapidly towards the centre of the cluster or galaxy and is less than a Hubble time within the innermost few hundred kiloparsecs This results in a cooling flow in which the gas density rises in order to maintain pressure to support the weight of the overlying gas The rate at which mass is deposited by the flow is inferred to be several hundreds of solar masses

per year in some clusters The fraction of clusters in which cooling flows are found may exceed 50 per cent Small flows probably occur in most normal elliptical galaxies that are not in rich clusters The implications of this simple phenomenon are profound for we appear to be witnessing the ongoing formation of the central galaxy In particular since most of the gas is undetected once it cools below about 3 million K it appears to form dark matter There is no reason why it should be detectable with current techniques if each cooling proton only recombines once and the matter condenses into objects of low mass

Cosmological Aspects of X-Ray Clusters of Galaxies W.C. Seitter,2012-12-06 The NATO Advanced Study Institute Cosmological Aspects of X Ray Clusters of Galaxies took place in Vel en Westphalia Germany from June 6 to June 18 1993 It addressed the fruitful union of two topics cosmology and X ray clusters both of which carry substantial scientific weight at the beginning of the last decenium of the last century in the second millenium of our era The so far largest X ray All Sky Survey observed by the ROSAT X ray satel lite and ROSAT s deep pointed observations have considerably enlarged the base of X ray astronomy particularly concerning extragalactic sources Cosmology has gained significant impetus from the large optical direct and spectroscopic surveys based on high quality 2 dimensional receivers at large telescopes and powerful scanning devices harvesting the full information content from the older technique of employing photographic plates Radioastronomy and IR astronomy with IRAS as well as r astronomy with GRO continue and strengthen the role of extragalactic research The rapidly growing computer power in data reduction and data storage facilities support the evolution towards large number statistics A most significant push was given to early cosmology by the needs of physics in trying to unravel the nature of forces which govern our material world The topic of the ASI was chosen because it opens new vistas on this for ever new problem the universe Clusters of galaxies probe large scale matter distributions and the structure of space time

Clusters of Galaxies John S. Mulchaey,Alan Dressler,Augustus Oemler,2010-06-10 Clusters of galaxies are the largest and most massive collapsed systems in the Universe In addition to containing thousands of galaxies these systems contain large amounts of hot X ray emitting gas and dark matter This volume contains a series of review papers on this exciting and important astronomical topic by international leaders in the field The work is appropriate as an introduction for physics and astronomy graduate students as well as a reference source for professionals

A Pan-Chromatic View of Clusters of Galaxies and the Large-Scale Structure Manolis Plionis,O. López-Cruz,D. Hughes,2009-09-03 The reviews presented in this volume cover a huge range of cluster of galaxies topics Readers will find the book essential reading on subjects such as the physics of the ICM gas the internal cluster dynamics and the detection of clusters using different observational techniques The expert chapter authors also cover the huge advances being made in analytical or numerical modeling of clusters weak and strong lensing effects and the large scale structure as traced by clusters

Clusters and Groups of Galaxies F. Mardirossian,G. Giuricin,M. Mezetti,2012-12-06 The large scale structure of the Universe and systems Clusters and Groups of galaxies are topics like Superclusters They fully justify the meeting on Clusters of great interest and

Groups of Galaxies The topics covered included the spatial distribution and the clustering of galaxies the properties of Superclusters Clusters and Groups of galaxies radio and X ray observations the problem of unseen matter theories concerning hierarchical clustering pancakes cluster and galaxy formation and evolution The meeting was held at the International Center for Theoretical Physics in Trieste Italy from September 13 to September 16 1983 It was attended by about 150 participants from 22 nations who presented 67 invited lectures il and contributed papers cp and 45 poster papers pp The Scientific Organizing Committee consisted of F Bertola P Biermann A Cavaliere N Dallaporta D Gerba1 M Hack J V Peach D Sciamia Chairman G Setti M Tarenghi We are particularly indebted to D Sciamia A Cavaliere and F Bertola for their work of coordination We were acting as the three members of the Local Organizing Committee Moreover we are pleased to thank the Chairmen of the Sessions M Hack N Da11aporta G Burbidge B Mills M Rees P Biermann L Z Fang L Gouguenheim for their valuable help

Clusters of Galaxies William R. Oegerle, Michael J. Fitchett, Laura Danly, Space Telescope Science Institute, 1990 Collected in this volume are the review papers from the Space Telescope Science Institute symposium on Clusters of Galaxies held in May 1989 Fifteen experts in the field have presented summaries of our current understanding of the formation and evolution of clusters and their constituent galaxies Subjects covered include the existence and importance of subclustering models of the evolution of clusters and the intracluster medium the effect of the cluster environment on galaxies observations of high redshift clusters and the use of clusters as tracers of large scale structure This book provides a timely focus for future observational and theoretical work on clusters of galaxies

Galaxy Formation Malcolm Longair, 2007-12-12 Delineating the huge strides taken in cosmology in the past ten years this much anticipated second edition of Malcolm Longair's highly appreciated textbook has been extensively and thoroughly updated It tells the story of modern astrophysical cosmology from the perspective of one of its most important and fundamental problems how did the galaxies come about Longair uses this approach to introduce the whole of what may be called classical cosmology What's more he describes how the study of the origin of galaxies and larger scale structures in the Universe has provided us with direct information about the physics of the very early Universe

Literature 1976, Part 1 S. Böhme, U. Esser, W. Fricke, U. Güntzel-Lingner, I. Heinrich, F. Henn, D. Krahn, L. D. Schmadel, H. Scholl, G. Zech, 2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of

greater convenience for the user Volume 17 contains literature published in 1976 and received before August 15 1976 some older literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy We want to acknowledge valuable contributions to this volume by Zentralstelle für Atomkernenergie Dokumentation Leopoldshafen which supported our abstracting service by sending us retrospective literature searches

Outskirts of Galaxy Clusters (IAU C195) International Astronomical Union. Colloquium, 2004-12-16 This book contains the proceedings of the International Astronomical Union Colloquium no 195 held in Torino Italy in 2004 The meeting investigated the formation of galaxies within a full cosmological context focusing on the outer regions of galaxy clusters The observed correlation of optical and radio properties of galaxies with their environment indicates that the formation and evolution of galaxies is intimately linked to the formation of large scale structure With chapters written by leading authorities in the field this timely volume investigates the role of the environment in determining the properties of galaxies It describes the distribution of matter and galaxies on the largest scales in the Universe the processes of cluster and galaxy formation their role and interplay This is a valuable collection of review articles for professional astronomers

Globular Clusters - Guides to Galaxies Tom Richtler, Søren Larsen, 2008-11-23 The principal question of whether and how globular clusters can contribute to a better understanding of galaxy formation and evolution is perhaps the main driving force behind the overall endeavour of studying globular cluster systems Naturally this splits up into many individual problems The objective of the Joint ESO FONDAP Workshop on Globular Clusters Guides to Galaxies was to bring together researchers both observational and theoretical to present and discuss the most recent results Topics covered in these proceedings are internal dynamics of globular clusters and interaction with host galaxies tidal tails evolution of cluster masses accretion of globular clusters detailed descriptions of nearby cluster systems ultracompact dwarfs formations of massive clusters in mergers and elsewhere the ACS Virgo survey galaxy formation and globular clusters dynamics and kinematics of globular cluster systems and dark matter related problems With its wide coverage of the topic this book constitutes a valuable reference of the scientific knowledge of the field
