Emissions and Coking* covers the latest advancements in coal utilization including coal conversion processes and mitigation  
of environmental impacts providing an up to date source of information for a cleaner and more environmentally friendly use  
of coal with a particular emphasis on the two biggest users of coal utilities and the steel industry Coverage includes recent  
advances in combustion co firing gasification and on the minimization of trace element and CO2 emissions that is ideal for  
plant engineers researchers and quality control engineers in electric utilities and steelmaking Other sections cover new  
advances in clean coal technologies for the steel industry technological advances in conventional by products the heat  
recovery non recovering cokemaking process and the increasing use of low quality coals in coking blends Readers will learn  
how to make more effective use of coal resources deliver higher productivity save energy and reduce the environmental  
impact of their coal utilization Provides the current state of the art and ongoing activities within coal conversion processes  
with an emphasis on emerging technologies for the reduction of CO2 and trace elements Discusses innovations in

processes of coal gasification and coal liquefaction are reviewed While coal conversion technology is not likely to provide a  
significant amount of synthetic fuel within the next several years there is a clear interest both in government and private  
sectors in the development of this technology to hedge against ever diminishing petroleum supplies especially from foreign  
sources It is evident from this rather cursory survey that there is some old technology that is highly reliable new technology  
is being developed but is not ready for commercialization at the present state of development The area of coal conversion is  
ripe for exploration both on the applied and basic research levels A great deal more must be understood about the reactions  
of coal the reactions of coal products and the physics and chemistry involved in the various stages of coal conversion  
processes in order to make this technology economically viable      *Direct and Indirect Coal Conversion Technology in*
