**Introduction to Coast Processes and Geomorphology**, 2009 Written for undergraduate students studying coastal geomorphology this is the complete guide to the processes at work on our coastlines and the features we see in coastal systems across the world Accessible to students from a range of disciplines the quantitative approach of this book helps to build a solid understanding of wave and current processes that shape coastlines The resulting processes of erosion transport and deposition and the features they create are clearly explained with over 400 illustrations and photographs From sandy beaches to coral reefs the major coastal features are related to contemporary processes and to sea level changes over the past 25 000 years Key equations describing or predicting measurements from instruments used to map these processes are all presented in this wide ranging overview Davidson Arnott completes this teaching package with online material that brings the subject to life including videos of coastal processes and virtual field trips

**An Introduction to Coastal Geomorphology** John Pethick, 1984

Introduction to Coastal Processes and Geomorphology Gerhard Masselink, Michael G. Hughes, 2003 Coastal environments are arguably the most important and intensely used of all areas settled by humans The coastline changes not only over the centuries or decades but in a matter of hours and minutes This rapid development applies both to the form of the coastline and to coastal processes This new book is an introduction to the environments and processes that occur along the world's coastline The coastlines of the world provide natural laboratories for investigating the physical chemical and biological processes that produce the rich diversity of coastal landforms Introduction to Coastal Processes and Geomorphology begins by addressing generic concepts global issues and processes that are common to most coastal environments including the morphodynamic paradigm Quaternary sea level fluctuations tides waves and sediment transport processes Later chapters

address the morphodynamics of the five main types of coastal environments namely fluvial tide and wave dominated environments rocky coasts and coral reefs and islands The final chapter considers the issue of coastal management and in particular the management of coastal erosion This comprehensive and in depth book is an essential reference handbook for students looking to extend their analytical skills and interest in coastal morphodynamics Fully illustrated throughout each chapter contains boxed sections designed to aid further study by providing either a further analysis or treatment of a particular issue an interesting application of a principle just discussed in the body of the text or a virtual field trip Coasts Eric Charles Frederick Bird,1984-01-01 *Introduction to Coastal Processes and Geomorphology* Robin G.
