Basic Almost Poised Hypergeometric Series:

Basic Almost-Poised Hypergeometric Series Wenchang Chu,1998 Presents a systematic treatment for the evaluation of basic almost poised series Some 200 identities are covered among which most are believed to be new Their connections with the q Clausen formulae as well as Rogers Ramanujan identities are sketched No index Annotation copyrighted by Book News Inc Portland OR

Basic Almost-Poised Hypergeometric Series Wenchang Chu,2014-09-11 Dedicated to extensive research on basic almost poised hypergeometric series this title establishes approximately 200 formulas It also provides their applications to bilateral series q Clausen formulae and Rogers Ramanujan identities

Dynamical Zeta Functions, Nielsen Theory and Reidemeister Torsion Alexander Fel'shtyn,Alexander Fel'shtyn,2000 In the paper we study new dynamical zeta functions connected with Nielsen fixed point theory The study of dynamical zeta functions is part of the theory of dynamical systems but it is also intimately related to algebraic geometry number theory topology and statistical mechanics The paper consists of four parts Part I presents a brief account of the Nielsen fixed point theory Part II deals with dynamical zeta functions connected with Nielsen fixed point theory Part III is concerned with analog of Dold congruences for the Reidemeister and Nielsen numbers In Part IV we explain how dynamical zeta functions give rise to the Reidemeister torsion a very important topological invariant which has useful applications in knots theory quantum field theory and dynamical systems

Iterated Function Systems and Permutation Representations of the Cuntz Algebra Ola Bratteli,Palle E. T. Jørgensen,1999 This book is intended for graduate students and research mathematicians working in functional analysis

Invariant Measures for Unitary Groups Associated to Kac-Moody Lie Algebras Doug Pickrell,2000 The main purpose of this paper is to prove the existence and in some cases the uniqueness of unitarily invariant measures on formal completions of groups associated to affine Kac Moody algebras and associated homogeneous spaces The basic invariant measure is a natural generalization of Haar measure for a simply

connected compact Lie group and its projection to flag spaces is a generalization of the normalized invariant volume element. The other invariant measures are actually measures having values in line bundles over these spaces; these bundle valued measures heuristically arise from coupling the basic invariant measure to Hermitian structures on associated line bundles but in this infinite dimensional setting they are generally singular with respect to the basic invariant measure.

Homogeneous Integral Table Algebras of Degree Three: A Trilogy Harvey I. Blau, 2000. Homogeneous integral table algebras of degree three with a faithful real element. The algebras of the title are classified to exact isomorphism; that is, the sets of structure constants which arise from the given basis are completely determined. Other results describe all possible extensions pre-images with a faithful element which is not necessarily real of certain simple homogeneous integral table algebras of degree three. On antisymmetric homogeneous integral table algebras of degree three. This paper determines the homogeneous integral table algebras of degree three in which the given basis has a faithful element and has no nontrivial elements that are either real symmetric or linear and where an additional hypothesis is satisfied. It is shown that all such bases must occur as the set of orbit sums in the complex group algebra of a finite abelian group under the action of a fixed point free automorphism of order three. Homogeneous integral table algebras of degree three with no nontrivial linear elements. The algebras of the title which also have a faithful element are determined to exact isomorphism. All of the simple homogeneous integral table algebras of degree three are displayed and the commutative association schemes in which all the nondiagonal relations have valency three and where some relation defines a connected graph on the underlying set are classified up to algebraic isomorphism. *Generalized Hypergeometric Series* Ratan Prakash Agarwal, 1963. **Special**

Groups M. A. Dickmann, Francisco Miraglia, 2000. This monograph presents a systematic study of Special Groups, a first order universal existential axiomatization of the theory of quadratic forms which comprises the usual theory over fields of characteristic different from 2 and is dual to the theory of abstract order spaces. The heart of our theory begins in Chapter 4 with the result that Boolean algebras have a natural structure of reduced special group. More deeply every such group is canonically and functorially embedded in a certain Boolean algebra, its Boolean hull. This hull contains a wealth of information about the structure of the given special group and much of the later work consists in unveiling it. Thus in Chapter 7 we introduce two series of invariants living in the Boolean hull which characterize the isometry of forms in any reduced special group. While the multiplicative series expressed in terms of meet and symmetric difference constitutes a Boolean version of the Stiefel-Whitney invariants, the additive series expressed in terms of meet and join which we call Horn-Tarski invariants does not have a known analog in the field case; however, the latter have a considerably more regular behaviour. We give explicit formulas connecting both series and compute explicitly the invariants for Pfister forms and their linear combinations. In Chapter 9 we combine Boolean theoretic methods with techniques from Galois cohomology and a result of Voevodsky to obtain an affirmative solution to a long standing conjecture of Marshall concerning quadratic forms over formally real

Pythagorean fields Boolean methods are put to work in Chapter 10 to obtain information about categories of special groups reduced or not And again in Chapter 11 to initiate the model theoretic study of the first order theory of reduced special groups where amongst other things we determine its model companion The first order approach is also present in the study of some outstanding classes of morphisms carried out in Chapter 5 e g the pure embeddings of special groups Chapter 6 is devoted to the study of special groups of continuous functions *Uniform Rectifiability and Quasiminimizing Sets of Arbitrary Codimension* Guy David, Stephen Semmes, 2000 This book is intended for graduate students and research mathematicians interested in calculus of variations and optimal control optimization Canadian Journal of Mathematics, 1958 **Journal of the London Mathematical Society** London Mathematical Society, 1962 *Portugaliae Mathematica* Antonio A.
