The Cloud Chamber Homer C. Wilkins, American Institute of Physics, 1975 *Atoms, Molecules and Photons* Wolfgang Demtröder, 2006-03-06 The detailed understanding of matter its phase transitions and its interaction with radiation could be only reached after its microscopic structure determined by the kind of atoms or molecules as basic constituents of matter had been investigated This knowledge allowed the controlled optimization of characteristic properties of matter Atomic physics therefore represents not only an area of important fundamental research but has furthermore many applications which have essentially formed our present technical world The understanding of materials and their use in daily life has major impact of our culture and our attitude towards nature and our environment This textbook is aimed as an introduction to the microscopic world of atoms molecules and photons It illustrates how our knowledge about the microscopic structure of matter and radiation came about and which crucial experiments forced an extension and refinement of existing classical theories culminating in the development of quantum theory which is now accepted as the basic theory of atomic and molecular physics The book therefore starts with a short historical review about the role of experiments for correcting erroneous ideas and proving the existence of atoms and molecules The close interaction between experiments and theory has been one of the main reasons for the rapid development of atomic physics in the 19 and 20 centuries *The Discovery of Anti-matter* Richard Jerome Weiss, 1999 In 1936 at age 31 Carl David Anderson became the second youngest Nobel laureate for his discovery of antimatter when he observed positrons in a cloud chamber He is responsible for developing rocket power weapons that were used in World War II He was born in New York City in 1905 and was educated in Los Angeles He served for many years as a physics professor at California Institute of Technology Prior to Oppenheimer Anderson was offered the job of heading the Los Alamos atomic bomb program but could not assume the role because of family obligations He was a pioneer in studying cosmic rays at high altitudes first atop Pike's Peak then after the war in a specially equipped B-29
