Guide for Databricks® Spark Scala CRT020 Certification Rashmi Shah, Apache Spark is one of the fastest growing technologies in the Big Data computing world. It supports multiple programming languages like Java, Scala, Python, and R. Hence, many existing and new frameworks started to integrate the Spark platform as well in their platforms, e.g., Hadoop, Cassandra, EMR, etc. While creating Spark certification material, Hadoop Exam technical team found that there is no proper material and book is available for the Spark version 2.x which covers the concepts as well as use of various features and found difficulty in creating the material. Therefore, they decided to create a full-length book for Spark Databricks CRT020 Spark Scala Python or PySpark Certification, and the outcome of that is this book. In this book, the technical team tries to cover both

fundamental concepts of Spark 2 x topics which are part of the certification syllabus as well as add as many exercises as possible and in current version we have around 46 hands on exercises added which you can execute on the Databricks community edition because each of this exercises tested on that platform as well as this book is focused on the Scala version of the certification hence all the exercises and their solution provided in the Scala We have divided the entire book in the 13 chapters as you move ahead chapter by chapter you would be comfortable with the Databricks Spark Scala certification CRT020 All the exercises given in this book are written using Scala However concepts remain same even if you are using different programming language
