Coastal Dunes Form And Process:

Coastal Dunes Karl F. Nordstrom, Karl Nordstrom, Norbert Psuty, 1990 Coastal Dunes Form and Process Edited by Karl F Nordstrom Norbert Psuty Institute of Marine and Coastal Sciences Rutgers University New Brunswick New Jersey 08903 USA and Bill Carter Department of Environmental Studies University of Ulster Coleraine Co Londonderry BT52 1SA Northern Ireland Coastal Morphology and Research Series Series Editor Eric C F Bird This book deals with the formation and establishment of coastal dunes considering both forms and processes in a wide variety of environments These landforms are among the most sensitive to environmental change yet they provide extensive protection against both short term erosion and flooding and long term sea level rise Until now there has not been any major book to deal specifically with coastal dunes The current volume surveys a range of dune features such as the ephemeral characteristics in the rapidly subsiding Mississippi delta the extensive sand sheets of Australia and South Africa and the Holocene dunes of Western Europe and North America This book will provide essential background information for ecological and management studies of coastal dunes It will be of immense value to geomorphologists ecologists and other environmental scientists who work on the management of coastal dunes

Coastal Dunes M. L. Martínez, Norbert P. Psuty, 2007-09-14 Coastal dunes occur in almost every latitude from tropical to polar and have been substantially altered by human activities Many are already severely and irreversibly degraded Although these ecosystems have been studied for a long time as early as 1835 there has been a strong emphasis on the mid latitude dune systems and a lack of attention given to the tropics where unfortunately much of the modern exploitation and coastal development for tourism is occurring This book brings together coastal dune specialists from tropical and temperate latitudes which together cover a wide set of topics including geomorphology community dynamics ecophysiology biotic interactions and environmental problems and conservation A major product of this book is a set of recommendations for future research identifying relevant topics where detailed knowledge is still lacking It also identifies management tools that will promote and maintain the rich diversity of the dune environments in the context of continuing coastal development

The Biology of Coastal Sand Dunes M. Anwar Maun, 2009-03-05 Coastal zones are becoming increasingly topical and politically sensitive as they face relentless pressures from urban expansion recreational development and sea level rise due to climate change This timely book provides a comprehensive introduction to the formation dynamics maintenance and perpetuation of coastal sand dune systems It describes the interactions between living organisms and the physical processes of geomorphology A global range of examples enhance the book s international appeal Based on the research presented in this book simple to complex field studies and experiments could be designed at undergraduate and graduate levels to illustrate various biological principles This accessible book is intended for a diverse audience as an invaluable reference for researchers who study coastal dune systems and for novice researchers requiring a sound introduction to the subject This book is suitable for both senior undergraduate and graduate students taking courses in coastal zone management plant

ecology restoration ecology and conservation biology as well as the many professional ecologists and conservation biologists requiring a concise but authoritative overview of the topic The book also will be of relevance and use to coastal managers planners naturalists and anyone pursuing a greater understanding of coastal sand dunes

Coastline and Dune Evolution along the Great Lakes Timothy G. Fisher, Edward C. Hansen, 2014-07-30 Stemming from research in the three upper Great Lakes basins Superior Michigan and Huron the volume is organized by geologic time beginning with the reconstructed drainage for glacial Lake Minong southward across Michigan s Upper Peninsula and ending with the use of remote sensing and geospatial analysis in monitoring Lake Michigan coastal dunes

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international

geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

Handbook of Beach and Shoreface Morphodynamics Andrew D. Short, 1999 A highly readable book on the nature of beaches including the dynamics of the shoreface surf swash and backbeach and globally at the regional variations in beach systems from the tropics to the poles The beach and adjacent shoreface are the most dynamic part of the Earth's surface They represent a narrow zone where waves tides and winds continuously interact producing wherever sediment is available hundreds of thousands of kilometres of beach systems Beaches are also the focus of intense pressure from users and developers and for these reasons alone a knowledge of beach systems and their morphodynamics is critical to their sustainable management This book is the first to

provide an in depth and holistic view of beach systems looking both in detail at the different beach zones and globally at a range of parameters influencing regional variation examine the relationship between beaches and ancillary dune systems and includes chapters on beach ecology safety stratification and barrier evolution The book is designed for use in the classroom and the office being aimed at university level students and coastal professionals
