Dupuytren's Disease

Alfred Berger

Dupuytren's Disease:

Dupuytren's Disease Peter Brenner, Ghazi M. Rayan, 2003-02-26 Morbus Dupuytren is particularly widespread among northern Europeans. However, the therapeutic success rate often leaves much to be desired. A 50% recurrence rate after surgery indicates that the disease cannot be treated by surgery alone. This book therefore adopts two parallel approaches: emphasis is firstly placed on the systemic character of morbus Dupuytren in context with other connective tissue diseases by a description of the biochemical and molecular biological changes in the diseased connective tissues; secondly, a diversified picture of the given anatomical facts serves to explain the employment of the various therapeutic approaches. Further a description is given of the current surgical procedures.

Dupuytren's Disease and Related Hyperproliferative Disorders Charles Eaton, M. Heinrich Seegenschmiedt, Ardeshir Bayat, Giulio Gabbiani, Paul M. N. Werker, Wolfgang Wach, 2012-01-19 This book is based on results of the 2010 International Symposium on Dupuytren's disease held in Miami, Florida, but it also includes new data and additional chapters. It is hoped that it will raise awareness of this underestimated condition and promote cooperative efforts to work towards a cure. Up-to-date information is provided on the epidemiology, biology, and pathology of the disease. The principles and specifics of treatment are explored in detail. The indications for and techniques of radiotherapy, minimally invasive treatments, and open surgery are fully explained. The role of physical therapy is considered as well as the care of relapse and complications. The treatment of Ledderhose's disease and Peyronie's disease is also discussed. This book provides invaluable information for hand surgeons, podiatrists, orthopedists, radiation therapy specialists, and general practitioners. It will help to foster an interdisciplinary approach to the understanding and management of this debilitating disorder.

Dupuytren's Disease Raoul Tubiana, 1974 Dupuytren'sche Kontraktur

Dupuytren's Disease Alfred Berger, 1994 In this volume, a distinguished group of internationally renowned clinicians and basic researchers discuss the present state of knowledge of the etiology and pathogenesis of Dupuytren's contracture, a disease responsible for a considerable portion of disabilities within the working population all over the world. Although the riddle of how the contracture of the palmar fascia develops is still unsolved, the data on the pathobiochemistry and clinic of Dupuytren's Disease achieved in recent years has led to a better understanding of the biochemical and morphological processes underlying the deformation and malfunction of the afflicted tissues. Research in Dupuytren's Disease now enters the era of molecular medicine, which opens up new experimental means of studying the pathological changes which occur during the formation of the contracture on a molecular level. In particular, data are presented as to the role of specific biological macromolecules influencing the phenotype expression of the palmar fascia cells, which are involved in autoimmune reactions and present both at the cell surface as well as in the extracellular matrix to regulate cell-to-cell and cell-to-matrix interactions. In vitro cell culture models to investigate fibrocytic modulations are available and have been applied to study the effects of specific biological molecules on isolated cells from healthy palmar fascia and Dupuytren's contracture.

Complementary evaluations of morphological epidemiological and clinical data contribute essentially to the present understanding of the etiology and pathogenesis of Dupuytren's Disease This comprehensive and informative summary of the state of the art is completed by numerous references affixed to the individual contributions *Dupuytren's Disease* John Turner Hueston, Raoul Tubiana, 1985 *Dupuytren's Disease* Robert M.
