## **Dynamic Aspects Of Conformation Changes In Biological Macromolecules:**

Dynamic Aspects of Conformation Changes in Biological Macromolecules C. Sadron, 2012-12-06 On the day after the 1959 Cambridge Congress during which the International Union of Pure and Applied Biophysics was founded a biophysics section was formed within the Society of Physical Chemistry Societe de Chimie Physique Since then three of the Society's annual meetings the 11th 17th and 23rd were devoted exclusively to the physico chemical study of biological systems The first of these was held in June 1961 at a hotel in Col de Voza at the foot of an alpine glacier above Chamonix The second in May 1967 took place in the more learned setting of the venerable rooms of the National Museum of Natural History in Paris The third the one dealt with in the present volume was recently held at Orleans La Source in the newly built lecture theatres of the young University which is near the great Institutes of the National Centre for Scientific Research CNRS on the Sologne plateau These three stages are milestones of an evolution which characterises at least schematically the explosive evolution of biological physico chemistry The first colloquium with the title Deoxyribonucleic Acid Structure Synthesis and Functions actually marks the first contact of the physical chemist with one of the then most prestigious biological macromolecules the structure of which had just been discovered and in this way celebrated one of the first and most striking successes of molecular biology

**Macromolecules, Volume 3** Hans-Georg Elias, 2005 Providing a broad survey of the entire field Macromolecules integrates representations of chemistry physics and technology as well as including precise descriptions of basic phenomena and balanced treatments of facts and theory *Conformation of Biological Molecules and Polymers* Ernst David Bergmann, Bernard Pullman, 1973 Accuracy of potential functions in the analysis of biopolymer conformation The dipeptide model its significance and limitations Conformational properties of peptides deduced from energy calculations Interactions in polypeptides and proteins Experimental study of the conformation of dipeptides Dipole moments and conformations of dipeptides in solution Macromolecules · 1 Hans-Georg Elias, 1984-02-29 The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of

macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part 11 solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions
