impending  
movement"

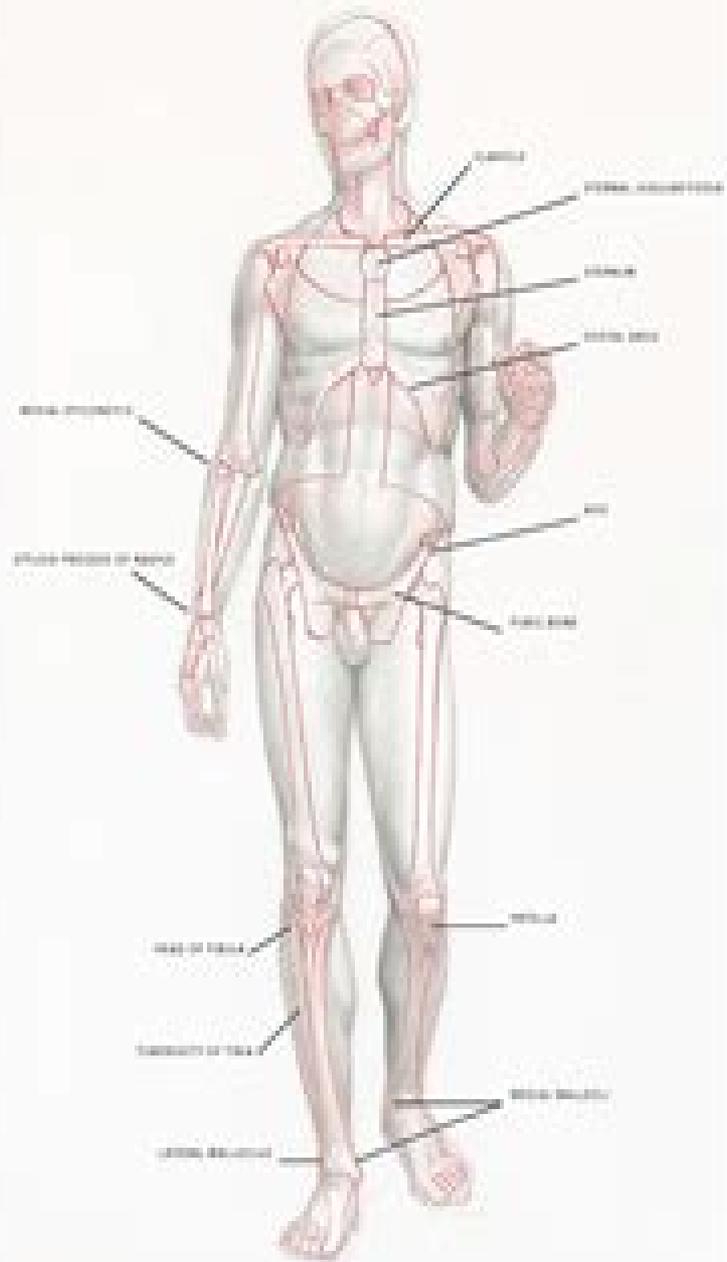

## DISSECTING THE DORYPHOROS

The *Doryphoros*, or *Spun Stone*, exhibits the proportional canon established by the Classical Greek sculptor Polykleitos in the fifth century BCE. The figure is depicted doing a *choreia*, a free, but strict, dance step, sculpted in marble canon. The *Doryphoros'* composition gives an example of idealized anatomy, creating a sense of impending movement and balance, and flexibility of the

All the essential skeletal and soft tissue marks are properly positioned on the *Doryphoros*, creating the artist's ideal proportioning of skeletal structure and muscular skeletal connections. Following these landmarks, it is possible to reconstruct the features of the *spun stone*, a stone *COPIA*. Although idealized as a "type" and somewhat general of their respective aspects, the figure's muscular form is correctly synthesized and properly positioned on the *spun stone*. One can speculate that the manipulation of proportion and anatomical forms helped maintain canon without canon and a high level of quality in the production of the last other Classical artworks.
