

Synopsis of

THE DYNAMIC SOCIETY

by

Graeme Donald Snooks

(Published by Routledge in cloth & paper in 1996)

[This synopsis was written in August 1993 once the first draft of the book had been completed.]

The purpose of *Dynamic Society* is to reconstruct the evolutionary pattern of human society over the past two million years and to explain the forces driving it. This has been done not just to satisfy our curiosity about the past, but in order to explore the options for our future. As our current and future problems have emerged from the dynamics of human society, their resolution can only come from a clear understanding of this process. The book's methods and conclusions are radically different from those of both the 'ecological engineers' (*Beyond the limits*) and the economists, who are currently concerned with the future. Unfortunately the ecological engineers are limited by their lack of understanding of how economies work, and the economists are trapped within prisons—abstract mathematical models—of their own making.

The book employs the historical method to reconstruct what I call existential models of reality, or models of existence (in contrast to logico-mathematical models). This is an approach that has much in common with that adopted by evolutionary biologists beginning with Charles Darwin. By combining this approach with the evidence I have been developing in various books for over a decade on very longrun economic change, I have been able to show that human society has emerged through a continuous dynamic process of an astonishingly uniform pattern.

The central hypothesis in the book is that the normal condition of human society is dynamic—hence the title, *The Dynamic Society*. This is a condition not generally recognized or acknowledged. The conventional view is that economic growth (of GDP per capita) is a modern invention. It has, scholars claim, only occurred since the Industrial Revolution. My analysis, however, shows that growth is an ancient invention, known to the pioneering civilizations of Mesopotamia. It is just that their methods (systematic conquest) for achieving it were different from our own (technological change).

Dynamic Society Exploring The Sources Of Change:

The Dynamic Society Graeme Snooks, 2002-09-11 This book discusses the nature and process of change in human society over the past two million years The author draws on economic historical and biological concepts to examine the driving forces of change and looks to likely developments in the future This analysis produces some very thought provoking and controversial conclusions

The Laws of History Graeme Snooks, 2002-09-26 In this unorthodox and trail blazing work Graeme Snooks argues that it is possible to construct a scientific theory of human history but only if we adopt a radically materialist theory of human nature

The Oxford Handbook of Evolution, Biology, and Society Dr. Rosemary Hopcroft, 2018-03-09 This book contains an overview of research on the interaction of biological and sociological processes Issues explored include the origins of social solidarity religious beliefs sex differences gender inequality human happiness social stratification and inequality identity status and other group processes race ethnicity and discrimination fertility and family processes crime and deviance cultural and social change

After the Soviet Empire, 2015-10-05 The break up of the Soviet Union is a key event of the twentieth century The 39th IIS congress in Yerevan 2009 focused on causes and consequences of this event and on shifts in the world order that followed in its wake This volume is an effort to chart these developments in empirical and conceptual terms It has a focus on the lands of the former Soviet Union but also explores pathways and contexts in the Second World at large The Soviet Union was a full scale experiment in creating an alternative modernity The implosion of this union gave rise to new states in search of national identity At a time when some observers heralded the end of history there was a rediscovery of historical legacies and a search for new paths of development across the former Second World In some parts of this world long repressed legacies were rediscovered They were sometimes as in the case of countries in East Central Europe built around memories of parliamentary democracy and its replacement by authoritarian rule during the interwar period Some legacies referred to efforts at establishing statehood in the wake of the First World War others to national upheavals in the nineteenth century and earlier In Central Asia and many parts of the Caucasus the cultural heritage of Islam in its different varieties gave rise to new markers of identity but also to violent contestations In South Caucasus Georgia Armenia and Azerbaijan have embarked upon distinctly different but invariably contingent paths of development Analogously core components of the old union have gone through tumultuous but until the last year and a half largely bloodless transformations The crystallization of divergent paths of development in the two largest republics of that union i e Russia and Ukraine has ushered in divergent national imaginations but also in series of bloody confrontations

Hybrid Noel Kingsbury, 2011-11-15 Noel Kingsbury reveals that even those imaginary perfect foods are themselves far from anything that could properly be called natural rather they represent the end of a millennia long history of selective breeding and hybridization Starting his story at the birth of agriculture Kingsbury traces the history of human attempts to make plants more reliable productive and nutritious a story that owes as much to accident and error as to

innovation and experiment Drawing on historical and scientific accounts as well as a rich trove of anecdotes Kingsbury shows how scientists amateur breeders and countless anonymous farmers and gardeners slowly caused the evolutionary pressures of nature to be supplanted by those of human needs and thus led us from sparse wild grasses to succulent corn cobs and from mealy white wild carrots to the juicy vegetables we enjoy today At the same time Kingsbury reminds us that contemporary controversies over the Green Revolution and genetically modified crops are not new plant breeding has always had a political dimension Publisher s description

Roberts,2008 The last half century has seen many studies of the origin of the English village As a cross disciplinary enquiry this book integrates materials from geography history economic history archaeology place name studies anthropology and even church architecture These provide varied foundations but the underlying subject matter always engages with landscape studies Beginning with a rigorous examination of evidence hidden within the surviving village and hamlet plans seen on eighteenth and nineteenth century maps the first half of the book shows how these can be classified mapped analysed and then interpreted as important parts of former medieval landscapes Many specific case studies are built into the argument all being drawn from the author s lifetime work on northern England and accessible language is employed From this base the argument develops with the objective of integrating landscape studies with the descriptive and analytical practices of history and drawing these together by using the cartographic methods of historical geography This foundation leads gently into deeper waters to the landed estates in which all settlements developed and the farming and social systems of which they were a part to the land holding arrangements that were integrated into the physical plans providing methods of sharing out the agricultural resources of arable meadow woodland and common grazings and finally to the social divisions present within a changing society A wholly new theme is found in the argument that certain types of land tenure were associated with a class of officer land agent or dreng who in northern England was often linked with the provision of tenants for new villages It

is clear from the evidence amassed that the deliberate founding of new villages and the establishment of new plans on older sites was taking place in the centuries between about AD 900 and 1250 Finally the study moves beyond the North of England to review the European roots of planned villages and hamlets and concludes with a challenging hypothesis about their origin in the whole of England This provides pointers towards future enquiry
