## Abstract

The possibility of using mathematics to model church growth is investigated using ideas from population modeling. It is proposed that a major mechanism of growth is through contact between religious enthusiasts and unbelievers, where the enthusiasts are only enthusiastic for a limited period. After that period they remain church members but less effective in recruitment. This leads to the general epidemic model which is applied to a variety of church growth situations. Results show that even a simple model like this can help understand the way in which churches grow, particularly in times of religious revival. This is a revised version of Hayward (1999) using System Dynamics and some small modifications to the SIR model <sup>1</sup>.

Key Words: Church Growth, Population Models, Diffusion, Differential Equations, Socio-physics, Epidemics, Revival, System Dynamics, Loop Impact.

## 1 Introduction

### 1.1 Background To Church Growth

“Church Growth” is a recent subject area which seeks to analyse why Christian churches, at various levels of organisation, grow or decline. Although spiritual growth is included in the subject, numerical growth – how many attend or belong to a church – is a vital area for analysis. The stimulus for investigating the reasons why churches grow came from western missionary organisations in the late 1950’s. They were concerned with the effectiveness of the missions they had founded, and needed to examine this effectiveness in order to determine priorities for funding. The pioneer in this field was Donald McGavran who did much to encourage these missionary organisations to see the vast potential for numerical growth in the non-western world. Although numerical growth is not a requirement of all missionary endeavours (McGavran, 1963), it was nevertheless felt that situations needed to be analysed with the factors that encourage and inhibit growth identified.

Church growth thinking is divided into two strands; the Church Growth Movement, which is based within the denominations and seminaries of the Christian church to serve their needs; and the Social Science strand whose focus is academic research. The two strands have tended to remain separate, perhaps reflecting a certain amount of mutual suspicion between them. It is perhaps not surprising that those working within churches distrust sociologists as until recently the prevailing
