Dynamics Of Close Binary Systems:

Dynamics of Close Binary Systems Zdenek Kopal, 2012-12-06 The aim of the present book will be to provide a comprehensive account of our present knowledge of the theory of dynamical phenomena exhibited by close binary systems and on the basis of such phenomena as have been attested by available observations to outline probable evolutionary trends of such systems in the course of time The evolution of the stars motivated by nuclear as well as gravitational energy sources constitutes nowadays a well established branch of stellar astronomy No theories of such an evolution are as yet sufficiently specific let alone infallible not to require continual tests by a confrontation of their consequences with the observed properties of actual stars at different stages of their evolution The discriminating power of such tests depends of course on the range of information offered by the test objects Single stars which move alone in space are now known to represent only a minority of objects constituting our Galaxy of Chapter 1 2 and are moreover not very revealing of their basic physical characteristics such as their masses or absolute dimensions If there were no binary systems in the sky the only star whose vital statistics would be fully known to us would be our Sun *Dynamics of Close Binary Systems* Zdeněk Kopal, 1978

KOPAL, 2018 *Hydrodynamics of Mass Transfer and Accretion in Close Binary Systems With Compact Objects*, 2003 Most stars are formed in binary or multiple systems Many of these stars will undergo some period of mass transfer at some point during their lifetimes Hence it is useful to understand the dynamics of mass transfer in binary star systems in order to better understand the current population of stars in the Galaxy and their evolution A natural class of objects for study are the close binary stars that contain compact objects such as neutron stars or black holes These systems are bright X ray emitters allowing us to study the circumstellar gas within them We use numerical hydrodynamic modeling to study mass transfer processes in the high mass X ray binaries including the evolutionary sequence between wind fed and disk fed systems elliptical orbit X ray binaries and the global dynamics of LMC X 4 in 3D We also investigate the properties of high resolution 3D accretion disks including transport via global wave modes the effects of tidal stream impact and the fluid response of tilted disks **Astrophysical Hydrodynamics** Steven N. Shore, 2008-06-25 This latest edition of the proven and

comprehensive treatment on the topic from the bestselling author of *Tapestry of Modern Astrophysics* has been updated and revised to reflect the newest research results Suitable for AS0000 and AS0200 courses as well as advanced astrophysics and astronomy lectures this is an indispensable theoretical backup for studies on celestial body formation and astrophysics Includes exercises with solutions **Problems of Cosmogony and Stellar Dynamics** James Jeans,1919 Literature 1997, Part 1 Astronomisches Rechen-InstitutARI,2013-11-11 Astronomy and Astrophysics Abstracts is devoted to the recording summarizing and indexing of astronomical publications throughout the world Two volumes are scheduled to appear per year Volume 67 records 10 903 papers covering besides the classical fields of astronomy and astrophysics such matters as space flights related to astronomy lunar and planetary probes and satellites meteorites and interplanetary matter X rays and cosmic rays quasars and pulsars The abstracts are classified under more than one hundred subject categories thus permitting quick surveying of the bulk of material published on the same topic within six months For instance this volume records 119 papers on minor planets 155 papers on supernovae and 554 papers on cosmology *Publications of the Astronomical Society of Japan* Nihon Tenmon Gakkai,2008 **dynamics of close binary systems** magdy abd el-malek "hanna,2001 *Literature 1989, Part 1* Astronomisches Rechen-Institut,2013-11-11 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Review Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine
