Nomenclature of dyes intermediates

- A large number of variety of intermediates involved in dyestuff production cannot always be named by their chemical names because chemical nomenclatures may lead to confusion.
- For example, H-acid may be named chemically as:
 - 1-amino-8-hydroxy-naphthalene-3,6-disulphonic acid or
 - 1-hydroxy-8-amino-naphthalene-3,5 disulphonic acidthe chemical names are different but the compounds are identical.
- The usual practice is to name dyes intermediates by commercial names such as H-acid, Y acid, naphthol AS, Fast blue B base, Fast scarlet G base, etc.
- These commercial names as compared to the nomenclature are short, symbolic and simple even for a layman in trade.

Nomenclature of dyes

- Hundreds of dyes are being synthesised in the laboratory.
- Of these about 3600 are used commercially.
- Various systems of nomenclature are known.
- Two of these are as follows:

Commercial naming of dyes

- In the earlier times, the commercial names of dyes are coined by individual manufacturers and these usually consist of three or four parts.
- The trademark name of the class comes first and is followed by words, letters or numbers.
- These describe the shade and other characteristics, strength, physical form etc.
- The code letters used by different manufacturers are not standardized
- The alphabetical letters following the trade names may refer to the shade of the dye, e.g.,
