Dynamic Modeling Of Transport Process Systems:

Dynamic Modeling of Transport Process Systems C. A. Silebi, William E. Schiesser, 2012-12-02 This book presents a methodology for the development and computer implementation of dynamic models for transport process systems Rather than developing the general equations of transport phenomena it develops the equations required specifically for each new example application These equations are generally of two types ordinary differential equations ODEs and partial differential equations PDEs for which time is an independent variable The computer based methodology presented is general purpose and can be applied to most applications requiring the numerical integration of initial value ODEs PDEs A set of approximately two hundred applications of ODEs and PDEs developed by the authors are listed in Appendix 8 *Applied Mechanics Reviews*, 1995

Adaptive Systems in Control and Signal Processing 1995 Cs. Banyasz, 2014-05-23 Leading academic and industrial researchers working with adaptive systems and signal processing have been given the opportunity to exchange ideas concepts and solutions at the IFAC Symposia on Adaptive Systems in Control and Signal Processing This postprint volume contains all those papers which were presented at the 5th IFAC Symposium in Budapest in 1995 The technical program was composed of a number of invited and contributed sessions and a special case study session providing a good balance between applications and theory oriented papers Guide to Programs National Science Foundation (U.S.), 1990

Energy Optimization in Process Systems and Fuel Cells Stanislaw Sieniutycz, Jacek Jezowski, 2013-02-14 Energy Optimization in Process Systems and Fuel Cells Second Edition covers the optimization and integration of energy systems with a particular focus on fuel cell technology With rising energy prices imminent energy shortages and increasing environmental impacts of energy production energy optimization and systems integration is critically important The book applies thermodynamics kinetics and economics to study the effect of equipment size environmental parameters and economic factors on optimal power production and heat integration Author Stanislaw Sieniutycz highly recognized for his expertise and teaching shows how costs can be substantially reduced particularly in utilities common in the chemical industry This second edition contains substantial revisions with particular focus on the rapid progress in the field of fuel cells related energy theory and recent advances in the optimization and control of fuel cell systems New information on fuel cell theory combined with the theory of flow energy systems broadens the scope and usefulness of the book Discusses engineering applications including power generation resource upgrading radiation conversion and chemical transformation in static and dynamic systems Contains practical applications of optimization methods that help solve the problems of power maximization and optimal use of energy and resources in chemical mechanical and environmental engineering **Energy Optimization in Process Systems** Stanislaw Sieniutycz, Jacek Jezowski, 2009-05-06 Despite the vast research on energy optimization and process integration there has to date been no synthesis linking these together This book fills the gap presenting optimization and integration in energy and process engineering The content is based on the current literature and

includes novel approaches developed by the authors Various thermal and chemical systems heat and mass exchangers thermal and water networks energy converters recovery units solar collectors and separators are considered Thermodynamics kinetics and economics are used to formulate and solve problems with constraints on process rates equipment size environmental parameters and costs Comprehensive coverage of dynamic optimization of energy conversion systems and separation units is provided along with suitable computational algorithms for deterministic and stochastic optimization approaches based on nonlinear programming dynamic programming variational calculus Hamilton Jacobi Bellman theory Pontryagin s maximum principles and special methods of process integration Integration of heat energy and process water within a total site is shown to be a significant factor reducing production costs in particular costs of utilities for the chemical industry This integration involves systematic design and optimization of heat exchangers and water networks HEN and WN After presenting basic insight based Pinch Technology systematic optimization based sequential and simultaneous approaches to design HEN and WN are described Special consideration is given to the HEN design problem targeting stage in view of its importance at various levels of system design Selected advanced methods for HEN synthesis and retrofit are presented For WN design a novel approach based on stochastic optimization is described that accounts for both grassroot and revamp design scenarios Presents a unique synthesis of energy optimization and process integration that applies scientific information from thermodynamics kinetics and systems theory Discusses engineering applications including power generation resource upgrading radiation conversion and chemical transformation in static and dynamic systems Clarifies how to identify thermal and chemical constraints and incorporate them into optimization models and solutions
