M. Drake, 1999-07-15 This book the fourth in a series from the Materials Research Society follows the tradition of earlier volumes in the series and covers a broad range of topics relating to structure and dynamics under geometric restrictions Emphasis is on methods of probing confined systems diffusion in porous media polymers and membranes dielectric and mechanical relaxation in nanopores rheology and friction studies of embedded liquids and properties of dendrimer supermolecules Participants from many varied disciplines share their points of view on the fundamental questions of how spatial restrictions modify a system to behave significantly different than in bulk how this difference relates to the molecular properties and how it can be probed      *Dynamics in Small Confining Systems: Volume 366* J. M. Drake, 1995-06-02 Interfacial science has rapidly expanded beyond the original realm of chemistry to include physics mechanical and chemical engineering biology materials science and other specialized sub fields All of these scientific disciplines come together in this book to share viewpoints and bridge gaps among the different approaches and methods presented Discussions focus on how ultrasmall geometries can force a system to behave in ways significantly different than it behaves in bulk how this difference affects molecular properties and how it is probed Topics include probing confined systems structure and dynamics of thin films nanorheology diffusion in porous systems adsorption and phase transitions and reaction dynamics      **Dynamics in Small Confining Systems** Drake JM Ed, 1993      *Dynamics in Small Confining Systems* Materials Research Society. Symposium Held November 27-30, 2000, Boston, Massachusetts, U.S.A.](#), 2001 The sixth symposium on Dynamics in Small Confining Systems held November 27 30 at the 2000 MRS Fall Meeting in Boston Massachusetts celebrated a decade of this series The program of the symposium covered a broad range of topics related to static and dynamic properties of confining systems probing of confined systems structure and dynamics of liquids at interfaces nanorheology and tribology adsorption diffusion in pores polymers and membranes dielectric relaxation and biological aspects Participants from various disciplines shared different points of view on the questions of how ultra small geometries can force a system to behave in ways significantly different from its behavior in the bulk how this difference affects molecular properties and how it is probed There appears to be a continuing interest in the dynamics and thermodynamics of confined molecular systems This symposium was an effective way to bring together different disciplines interested in common problems **Dynamics in Small Confining Systems - 2003:** John T. Fourkas, Pierre Levitz, Michael Urbakh, Kathryn J. Wahl, 2014-06-05 Interfacial science has rapidly expanded beyond the original realm of chemistry to include specialized subfields This book covers an expanding body of work dealing with the dynamics and thermodynamics of molecular systems in spatial confinement Participants from various disciplines share their views on how ultrasmall geometries can force a system to behave in ways significantly different than its behavior in bulk how this difference affects molecular properties and how it is probed Investigators are studying phenomena in a broad range of materials and confinement of liquids is also an important issue Advances in experiment theory and computation have greatly increased our understanding of dynamics in confined systems but this book proves that there is still much to be learned Topics include confined and anomalous dynamics in porous supramolecular and biological systems methods to probe dynamics in confinement microfluidics and hydrodynamics near solid surfaces friction and structural properties of fluids under shear dynamic force spectroscopy and numerical modeling and computational techniques of confined systems **Dynamics in Small Confining Systems** Materials Research Society, 1990 **Dynamics in Small Confining Systems III. Symposium Held December 2-5, 1996, Boston, Massachusetts, U.S.A**, 1996 The fourth symposium on Dynamics in Small Confining Systems held as part of the 1996 MRS Fall Meeting covered a broad range of topics related to static and dynamic properties of confining systems probing of confined systems structure and dynamics of liquids at interfaces nanorheology and tribology adsorption diffusion in pores and reactions Participants from various disciplines shared different points of view on the questions of how ultrasmall geometries can force a system to behave in ways significantly different from its behavior in the bulk how this difference affects molecular properties and how it is probed There appears to be a continuing interest in the dynamics and thermodynamics of confined molecular systems The symposium was an effective way to bring together different disciplines interested in The contributions in the book reflect the broad range of topics discussed at the meeting all

related to dynamics in small confining systems The papers appear in the book in the order of their presentation during the symposium **Dynamics in small confining systems** J. M. Dynamics in Small Confining Systems II Held in Boston, Massachusetts on November 28-December 1. 1994 ,1994 This symposium the third held as part of the MRS Fall Meetings series touched on a wide range of topics covering static and dynamic properties of small confining systems probing of confined systems structure and dynamics of liquids at interfaces nanorheology adsorption diffusion in pores and reactions Participants from various disciplines shared different points of view on the questions of how ultras small geometries can force a system to behave in ways significantly different than its behavior in the bulk how this difference affects molecular properties and how it is probed The contributions in the book reflect the broad range of topics discussed at the meeting all related to dynamics in small confining systems We hope that the interdisciplinary nature of the book and the meeting will help to bridge the gap among the different approaches and methods presented The papers appear in the book in the order of their presentation during the symposium which was organized in sessions entitled Probing Confined Systems Structure and Dynamics of Thin Films Nanorheology Diffusion in Porous Systems Adsorption and Phase Transitions and Reaction Dynamics MM
