Dynamics Of Data Envelopment Analysis Theory Of Systems Efficiency:

Dynamics of Data Envelopment Analysis Jati Sengupta, 2013-11-11 Data envelopment analysis develops a set of nonparametric and semiparametric techniques for measuring economic efficiency among firms and nonprofit organizations. Over the past decade this technique has found most widespread applications in public sector organizations. However, these applications have been mostly static. This monograph extends this static framework of efficiency analysis in several new directions. These include but are not limited to the following: 1 a dynamic view of the production and cost frontier where capital inputs are treated differently from the current inputs; 2 a direct role of the technological progress and regress, which is so often stressed in total factor productivity discussion in modern growth theory in economics; 3 stochastic efficiency in a dynamic setting where reliability improvement competes with technical efficiency; 4 flexible manufacturing systems where flexibility of the production process and the economies of scope play an important role in efficiency analysis; and 5 the role of economic factors such as externalities and input interdependences. Efficiency is viewed here in the framework of a general systems theory model. Such a view is intended to broaden the scope of applications of this promising new technique of data envelopment analysis. The monograph stresses the various applied aspects of the dynamic theory so that it can be empirically implemented in different situations. As far as possible, abstract mathematical treatments are avoided and emphasis placed on the statistical examples and empirical illustrations.

Efficiency Models in Data Envelopment Analysis J. K. Sengupta, B. Sahoo, 2006-10-06 This volume discusses the latest techniques and their economic applications for modern industries like computer, pharmaceutical, banking, and other manufacturing. Both econometric and mathematical programming techniques are analyzed so as to develop a synthetic approach.

Network Data Envelopment Analysis Chiang Kao, 2016-08-23 This book presents the underlying theory, model development, and applications of network Data Envelopment Analysis (DEA) in a systematic way. The field of network DEA extends and complements conventional DEA by considering not only inputs and outputs when measuring system efficiency but also the internal structure of the system being analyzed. By analyzing the efficiency of individual internal components and more particularly by studying the effects of relationships among components which are modeled and implemented by means of various network structures, the network DEA approach is able to help identify and manage the specific components that contribute to inefficiencies in the overall systems. This relatively new approach comprises an important analytical tool based on mathematical programming techniques with valuable implications to production and operations management. The existing models for measuring the efficiency of systems of specific network structures are also discussed, and the relationships between the system and component efficiencies are explored. This book should be able to inspire new research and new applications based on the current state of the art. Performance evaluation is an important task in management and is needed to i) better understand the past accomplishments of an organization and ii) plan for its future development. However, this task becomes rather challenging when multiple performance metrics are

involved DEA is a powerful tool to cope with such issues For systems or operations composed of interrelated processes managers need to know how the performances of the various processes evaluated and how they are aggregated to form the overall performance of the system This book provides an advanced exposition on performance evaluation of systems with network structures It explores the network nature of most production and operation systems and explains why network analyses are necessary

Efficiency versus

Sustainability in Dynamic Decision Making Bodo Glaser,2002-07-23 This book develops and analyzes dynamic decision models DDM with one trajectorial objective according to the methodology of multi criteria decision making MCDM Moreover DDMs which concomitantly pursue multiple objectives are analyzed with special emphasis given to hybrid models with scalar and trajectorial objectives as well as models with multiple trajectorial objectives Introducing the method of distance maximization crucially augments MCDM and proves to be invaluable for DDMs with nonexistent utopia trajectory or with sustainability as objective The notions of efficiency and sustainability are formally developed and counterposed by means of the construct of trajectorial objective which is presented here along with its implications as a natural advance upon the classical scalar objective
