Basic Astronomical Data Kaj A. Strand,1963 **Basic Astronomical Data** K. A. Strand,1986 **Basic Astronomical Data. Contributors** Kaj Aage Strand,1963 **Stars and Stellar Systems** Kaj A. Strand,1963 Databases & On-line Data in Astronomy M.A Albrecht,D Egret,2012-12-06 Data archiving has for many years been the most disregarded aspect of all data systems The increase in numbers of telescopes both groundbased and space borne and the increase in efficiency of detectors have generated overwhelming amounts of data Much of these data were and are not used on short timescales and should have been archived where they can be used later and or by others Archiving is essential Objects can change in the course of time New technological or scientific developments might require observing objects again The cost benefit ratio will become more and more important when considering the allocation of telescope time The retrieval of old data can then be crucial At present there are a number of data collections and data retrieval systems This book includes a series of clear and up to date descriptions of many important available data systems For professional astronomers librarians and computer engineers **Stars and stellar systems** K. Aa Strand,1963 **Sky Catalogue 2000.0: Volume 1** Alan Hirshfeld,Roger W. Scarsi,2013-03-09 The II international workshop on Data Analysis in Astronomy was intended to provide an overview on the state of the art and the trend in data analysis and image processing in the context of their applications in Astronomy The need for the organization of a second workshop in this subject derived from the steady growing and development in the field and from the increasing cross interaction between methods technology and applications in Astronomy The book is organized in four main sections Data Analysis Methodologies Data Handling and Systems dedicated to Large Experiments Parallel Processing New Developments The topics which have been selected cover some of the main fields in data analysis in Astronomy Methods that provide a major contribution to the physical interpretation of the data have been considered Attention has been devoted to the description of the data analysis and handling organization in very large experiments A review of the current major satellite and ground based experiments has been included At the end of the book the following Panel Discussions are included Data Analysis Trend in Optical and Radio Astronomy Data Analysis Trend in X and Gamma Astronomy Problems and Solutions in the Design of Very Large Experiments Trend on Parallel Processing Algorithms These contributions in a sense summarize the live reaction of the audience to the various topics **Structure and Evolution of the Galaxy** L.N. Mavridis,2012-12-06 The present volume contains papers presented during the Advanced Study Institute on the Structure and Evolution of the Galaxy held under the auspices of the Science Committee North Atlantic Treaty Organization NATO in Lagonissi near Athens Greece between 8 19

September 1969 Seventeen astronomers from eight countries acted as lecturers in the Institute which was attended by sixty three students from twelve countries All the lectures given in the Institute were included in the volume with the exception of two lectures given by Professor P van de Kamp on Stellar Parallaxes and Objects of Very Low Mass the manuscripts of which were not submitted in time in order to be considered for publication It is obviously impossible in a two weeks course to cover the vast field of the Structure and Evolution of the Galaxy in all its aspects Effort has been made however to give the students a general outline of the field In addition to the lectures ample time was spent in discussions and personal contacts In order to simplify the publication it was felt reasonable however not to include the discussions in the present volume

X-Ray Astronomy R.D. Andresen, 2013-11-11 The 15th ESLAB symposium was held at the end of June 1981 in Amsterdam with the topic being X ray astronomy The aim of this symposium was to bring together the international astrophysical community in order to 1 review the present state of X ray astronomy in the light of new observations gathered in recent missions and to review data on interesting objects in correlated wavelength regions 2 discuss theoretical models describing the phenomena observed 3 present ESA's European X ray Observatory Satellite EXOSAT and to discuss future X ray missions and their associated instrumentation These topics seemed to be so interesting for the scientific community that more than 120 contributions were submitted Of these 94 were finally accepted and approximately 200 participants attended the 5 day meeting The symposium was organised in nine sessions covering the whole field Every main topic was introduced by a review lecture covering the state of the art The aim of the meeting was to assess the impact of the new X ray findings on the general astronomical knowledge The discussion ranged from non degenerated stellar X ray sources and stellar coronae to supernovae bursters globular clusters normal galaxies and finally to cosmology In each field the philosophy was to bring together the relevant information obtained in radio optical and X ray observations followed by theoretical discussions A large number of contributed papers were also presented within this framework
