Stefanopoulou, Huei Peng, 2013-03-09 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination Fuel cell power

systems is a new and exciting industrial area which is receiving considerable commercial investment as a future energy technology. The IEEE Spectrum magazine New Year issue of 2004 cited this area as one whose development and progress should be observed closely over the coming years. Successful application of fuel cell technology will depend on many factors, not the least of which being how consistently their performance can be controlled. This Advances in Industrial Control monograph by Jay Pukrushpan, Anna Stefanopoulou and Huei Peng is a timely contribution to the area. As the authors so rightly say in their Preface, control engineers have different requirements from modelling, experimental studies and simulation work for designing a good control system, and this monograph presents a control oriented approach to these topics in the fuel cell power system field.

Directory of Published Proceedings, 2002 MECHANICAL ENGINEERING, ENERGY SYSTEMS AND SUSTAINABLE DEVELOPMENT -Volume IV Konstantin V. Frolov, Oleg N. Favorsky, R.A. Chaplin and Christos Frangopoulos, 2009-04-15. Mechanical Engineering Energy Systems and Sustainable Development theme is a component of Encyclopedia of Physical Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS) which is an integrated compendium of twenty one Encyclopedias. The Theme on Mechanical Engineering Energy Systems and Sustainable Development with contributions from distinguished experts in the field discusses mechanical engineering, the generation and application of heat and mechanical power and the design, production and use of machines and tools. These five volumes are aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers and Decision Makers, NGOs and GOs.

Integrated Power And Desalination Plants Asghar Husain, 2003-10-15. Application of advanced computer oriented techniques are necessary in the synthesis, design, analysis and operation of a complex integrated plant to produce power and freshwater by desalting seawater or brackish water at higher efficiency and lower cost. These are the two vital commodities to maintain sustainability of life, particularly in the arid regions where natural freshwater supply is either totally lacking or has become scarce. Even in the regions with polluted water resources such a system is required to support life. At the same time the available energy should be put to maximum use and life cycle analysis is essential to ensure sustainability of the systems. The contributors of this book, experts in their own respective fields, outline the various techniques enriched by their experience. The contents of the book would therefore be of great interest not only to designers and operators of dual purpose power desalination plants but also to educators and researchers, as well serve as a valuable source of information to those engaged in other areas of processing industry. The book is motivated by the growing importance of integrated power and desalination plants in general and in their respective regions in particular and the long felt need for an authoritative book on the subject. After a long gap of more than two decades following the publication of Principles of Desalination by Spiegler and Laird in 1980, this book would be a welcome addition to the literature in the field to serve as a valuable guide and reference to all those who are concerned with the integration of power and desalination plants.

It will also serve as a valuable source of information to those in the processing industry in general
