Customer Integration Doug Daetz, William Barnard, Rick Norman, 1995-10-20 Customer Integration Attaining higher levels of customer delight increasing the speed and efficiency in the product development process and increasing profits are goals many managers are struggling to achieve Customer Integrated Decision Making or CIDM is a process that will show managers how to reach these goals by integrating

the customer into the decision making process and incorporating the customer's wants and needs into the design of new products and services

Customer Integration The Quality Function Deployment QFD Leader's Guide for Decision Making focuses on the complete CIDM QFD process. The book details the reasons for using CIDM market identification techniques and QFD idea generation methodologies as well as some basic and advanced customer choice prediction approaches. This practical, structured and replicable process will provide a company of any size with the tools to assure its team's success as they move to become linked to the customer. Customer Integration opens with a comprehensive overview for executives followed by a detailed discussion of how CIDM QFD can increase profits for businesses in a variety of industries. The executive overview reviews the issues confronting companies today and gives reasons why executives will need to be linked to customers to compete. The second part of the book lays out some of the foundation knowledge that middle managers will need to have in order to commit to supporting individuals and teams and to complete CIDM QFD projects. Part II also offers practical discussions on the critical role of leadership and the challenges of implementation. The third part of the book provides a step-by-step explanation of the process along with a complete review of the necessary concepts and tools to make a CIDM QFD project happen. Customer Integration is designed for the whole company. It provides the information executives and managers need to undertake a Customer Integrated Decision Making project and the knowledge that team members need to assure success in their project.

Advance praise for Customer Integration Customer Integration is written for the entire management team from the executive to the project team members, challenging all not only to decide to use CIDM QFD but to achieve maximum value from the process. This is a book for those who believe delighting customers is a state of the art.

Michael E Holtzleiter, Manager Europe, Senco Fastening Systems: The CIDM concepts in this book go beyond the QFD matrix analysis to show how to introduce the process into a company and how to lead a multifunctional team through the process. These concepts are helping us balance the voice of the customer in our product development process. After just one project it is adding clarity and objectivity to our decisions by highlighting the trade-offs that must be made between customer wants, competitive pressures and our company's capabilities.

Ronald A Weeks, Corporate Planning Director, Cincom Systems Inc: Having completed a CIDM project I found Customer Integration to be a comprehensive documentation of this incredible process. This very replicable methodology truly allows companies to get at the real customer requirements. The way the book is divided into sections for the executive, project and middle manager and team members provides a clear perspective on hands-on for each.

Steve Nelson, Manager Emerging Markets, Senco Fastening Systems: If you are looking for structured processes that provide you with a better understanding of your customers, an understanding about what they mean by value that promotes leveling of customer knowledge among the enterprise that assures true teaming and reduces the time to bring innovations into the marketplace then Customer Integration is the book that you have been looking for.

Managing Innovation Joseph Tidd, J. R. Bessant, Keith Pavitt, 1997-06-26 Technologies are increasingly complex and expensive markets are more competitive and products and services more difficult to differentiate In such an environment organizations achieve competitive advantage through innovation They must approach innovation in its broadest sense including technological development marketing strategies and new work practices The corporate capacity for continuous change must be dramatically increased Management must understand how to translate new technologies and market opportunities into successful products and services The scope of this book is unique It seeks to integrate the fields of technological market and organizational innovation Based on European Asian and American best practice experience and the latest research in management **Managing Innovation** demonstrates that it is no longer sufficient to focus on a single dimension of innovation Instead it takes an integrative and holistic approach to the management of innovation It does this by the use of three key themes the identification and development of core competencies the constraints imposed by different technologies and markets and the structures and processes for organizational learning The use of these themes provides managers with the knowledge to understand and the skills to exploit innovation at both strategic and operational levels Designed for MBA and MSc courses in the management of technology and innovation **Managing Innovation** will also be relevant to managers at all levels in both manufacturing and service sectors
