Advances In Microbial Control Of Insect Pests:

Advances in Microbial Control of Insect Pests Rajeev K. Upadhyay, 2013-04-17 The insect remains in symbiotic associations with a tremendous number of microorganisms and some of them could be classified as parasitic pathogenic. Without question, insect pathogens act as natural mortality agents and represent the third leg of the triad of biological control, which is an environmentally sound alternative to chemical control. The virulence and pathogenicity of an insect parasite or disease agent are determined by the microbial genome as a result of the coordinated expression of a concert of genes. These genes may be organized as cassettes and be associated with transmissible DNA. The acquisition of these domains or pathogenicity islands may be sufficient to develop a transgenic virulent pathogen. The insect pathogens are very specific and this property can be exploited in making insects sick. However, rarely have field applications of highly virulent strains of viruses, fungi, bacteria, or protozoa resulted in massive insect population reductions or induced widespread persistent epizootics as the same is also governed by host susceptibility regulated by genetics, age, sex, and physiological state of the host. Insect pathogens causing acute or chronic diseases must be able to persist in the environment to multiply in the host and to spread to other susceptible hosts. In this book, I have attempted to bring together all recent studies regarding both fundamental and more applied research aspects related to entomopathogens: bacteria, viruses, fungi, and nematodes in order to facilitate their development and commercial exploitation. Advances in Agricultural Microbiology N.S. Subba Rao, 2016-06-06 Advances in Agricultural Microbiology is a collection of papers about the progresses in the field of agricultural microbiology. The said papers are contributions of different experts in related fields. The book is divided into three sections. Section A covers topics related to the role of microorganisms in the mobilization of nutrients for plant growth such as the relationship of microbial genetics and biological nitrogen plant surface microflora and plant nutrition and developments in grass bacteria associations. Section B discusses the use of microorganisms in the management of pathogens, pests, and weeds and includes topics such as the microbial control of insect pests, microbial herbicides, and agricultural antibiotics. Section C tackles strategies in bioconversion such as the production of biogas from agricultural wastes, bioconversion of lignocelluloses into protein-rich food and feed, and ethanol fuel from biomass. The text is recommended for biologists and agriculturists who would like to know more about the importance of microorganisms in the field of agriculture. **Advances in biocontrol of crop insect pests** Professor Travis Glare, Dr David Teulon, Prof Max Scott, Dr Azucena Gonzalez-Coloma, Prof. Shireen-Anne Davies, Dr Salvatore Arpaia, Dr Linda Muskat, Dr Claudia Preininger, Dr Shannon Borges, Professor Michael J.
