Advances in Cognitive Information Systems Lidia Ogiela,Marek R. Ogiela,2012-01-15 The development of computer science is now so rapid that we the readers in creasingly receive technology news about new solutions and applications which very often straddle the border between the real and the virtual worlds Computer science is also the area in which cognitive science is witnessing a renaissance be cause its combination with technical sciences has given birth to a broad scientific discipline called cognitive informatics And it is this discipline which has become the main theme of this monograph which is also to serve as a kind of guide to cognitive informatics problems This book is the result of work on systems for the cognitive analysis and inter pretation of various data The purpose of such an analytical approach is to show that for an in depth analysis of data the layers of semantics contained in these sets must be taken into account The interdisciplinary nature of the solutions proposed means that the subject of cognitive systems forming part of cognitive informatics becomes a new challenge for the research and application work carried out The authors of this monograph hope that it will guide Readers on an interesting and accurate journey through the intricacies of information and cognitive science

Cognitive Science: Recent Advances and Recurring Problems Fred Adams,Osvaldo Pessoa Jr.,Joao E. Kogler Jr.,2019-04-18 This book consists of an edited collection of original essays of the highest academic quality by seasoned

experts in their fields of cognitive science. The essays are interdisciplinary, drawing from many of the fields known collectively as the cognitive sciences. Topics discussed represent a significant cross section of the most current and interesting issues in cognitive science. Specific topics include matters regarding machine learning and cognitive architecture, the nature of cognitive content, the relationship of information to cognition, the role of language and communication in cognition, the nature of embodied cognition, selective topics in visual cognition, brain connectivity, computation and simulation, social and technological issues within the cognitive sciences, and significant issues in the history of neuroscience. This book will be of interest to both professional researchers and newer students and graduate students in the fields of cognitive science, including computer science, linguistics, philosophy, psychology, and neuroscience. The essays are in English and are designed to be as free as possible of technical jargon and therefore accessible to young scholars and to scholars who are new to the cognitive neurosciences. In addition to several entries by single authors, the book contains several interesting roundtables where researchers contribute answers to a central question presented to those in the focus group on one of the core areas listed above. This exciting approach provides a variety of perspectives from across disciplines on topics of current concern in the cognitive sciences.

[Advances in Cognitive Research, Artificial Intelligence and Neuroinformatics](#) Boris M. Velichkovsky, Pavel M. Balaban, Vadim L. Ushakov, 2021-04-17. This book reports on theoretical and experimental research answering key questions in neuroscience, philosophy of mind, and cognitive research. It gives a special emphasis on findings achieved within the territory of the former U.S.S.R. which has remained largely unknown to an international readership. The volume gathers authoritative studies on cognitive development, consciousness, attention, and perception. It covers research on eye movements, language, speech, and semantics, emotion, as well as brain functional states and a variety of decision-making processes. It also highlights important advances in cognitive robotics and artificial intelligence, discussing brain-computer interfaces and other practically relevant technologies. It includes studies on human subjects in both healthy and disease conditions and investigations on the molecular mechanisms of cognition in animal models. Chapters are based on invited lectures and peer-reviewed contributions to the 9th International Conference on Cognitive Sciences (Intercognsci 2020) held on October 10-16, 2020 in Moscow. The conference was organized by the Interregional Association of Cognitive Studies with the participation of the Pavlov Society for Neurophysiology and Higher Nervous Activity and supported by the Russian Academy of Sciences, the Russian Foundation for Basic Research, and a number of the north-eastern European research institutions. All in all, this book provides cognitive scientists around the world with a timely snapshot of interdisciplinary research and cutting-edge models and a major source of inspiration for future collaborations in the areas of artificial intelligence and cognitive neuroscience.
