Institute for Applied Systems Analysis IIASA published the results of a global energy study looking fifty years into the future *Energy in a Finite World A Global Systems Analysis* Cambridge Massachusetts Ballinger Publishing Co 1981 Not surprisingly this book raises almost as many questions as it answers thus it defines a broad range of research topics that might be taken up by IIASA or other research institutions around the world A 25 27 May 1981 workshop at IIASA entitled *A Perspective on Adaptive Nuclear Energy Evolutions Towards a World of Neutron Abundance* was a beginning on one of these topics it was organized by Wolf Hafele Kernforschungsanlage Jilich Jilich Federal Republic of Germany and IIASA and Arkadius Archie Harms McMaster University Hamilton Ontario Canada The origin of this workshop was the effort with in the IIASA energy study to explore possible sustainable global energy systems that might eventually replace the current consumptive system In investigating the possible contributions nuclear technologies might make to a sustainable energy system it had become clear that it is not so much particular distinct technologies within the nuclear family that should be examined as a question of particularly advantageous configurations of mutually complementary technologies Only when one considers exploiting a whole spectrum of arrangements of fission breeders fusion reactors and accelerators does the true potential of nuclear power become apparent
