**Advances in Photosynthesis Research** C. Sybesma, 2013-12-01 The Sixth International Congress on Photosynthesis took place from 1 to 6 August 1983 on the Campus of the Vrije Universiteit Brussel in Brussels Belgium These Proceedings contain most of the scientific contributions offered during the Congress The Brussels Congress was the largest thus far held in the series of International Congresses on Photosynthesis It counted over 1100 active participants The organizers tried to minimize the disadvantages of such a large size by making maximum use of the facilities available on a university campus Most contributions were offered in the form of posters which were displayed in a substantial number of classrooms The discussion sessions twice a day four or five in parallel took place in lecture rooms in the very vicinity of these classrooms In this way it was attempted to generate the atmosphere of a small meeting The unity of the subject Photosynthesis was preserved in the ten plenary lectures organized in such a way that a general overview of two diverse topics was given every day In addition there were the five times four parallel symposia dealing with some sixteen general topics Every editor of proceedings of a congress is faced with the problem of editing and arranging the contributions a problem compounded by the wide diversity and the large number of the 753 manuscripts

From July 31 to August 13 a NATO Advanced Study Institute on Photosynthesis was held at the Anargyrios and Korgialenios School on the Island of Spetsai Greece The Institute focused on techniques and recent advances in photosynthesis research and brought together teachers and students with a wide range of interest and experience It was a very stimulating occasion which allowed cross fertilization to occur between biophysicists biochemists molecular biologists and physiologists Lectures and discussions ranged from the description of the molecular structure of the photosynthetic bacterial reaction centre and of

tobacco Rubisco through to the regulation of carbon metabolism and the application of genetic engineering This book is comprised of the contents of the major lectures and a selection of relevant posters displayed at the Institute Taken together the book is an excellent representation of the most up to date thoughts and activities in photosynthesis research across a wide but interlocking spectrum of topics The papers presented here are a written record of the high quality of both the lecturers and students alike and emphasises the value of the NATO ASI series as a reference source The successful organisation of the Institute and the production of this book would not have been possible without the support of our colleagues We therefore wish to thank Pam Cook Lyn Barber Niki Gounaris Alison Telfer Sotiria Nikolaidon David Chapman Steven Mayes and Wei Qiu Wang for all their help during the course of the Institute
