Advances in Bistatic Radar Nicholas J. Willis, Hugh D. Griffiths, 2007-06-30 This comprehensive reference updates bistatic and multistatic radar developments since the publication of Nicholas Willis seminal book Bistatic Radar published in 1991 and revised in 1995 The book is organized into two major sections Bistatic Multistatic Radar Systems and Bistatic Clutter and Signal Processing New and recently declassified military applications are documented Civil applications are detailed for the first time including commercial and scientific systems Several of the most honored radar engineers of this era provide expertise in each of these applications Professionals in radar and sonar will find this book a valuable resource *Weather Radar Technology Beyond NEXRAD* National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Weather Radar Technology Beyond NEXRAD, 2002-08-31 Weather radar is a vital instrument for observing the atmosphere to help provide weather forecasts and issue weather warnings to the public The current Next Generation Weather Radar NEXRAD system provides Doppler radar coverage to most regions of the United States NRC 1995 This network was designed in the mid 1980s and deployed in the 1990s as part of the National Weather Service NWS modernization NRC 1999 Since the initial design phase of the NEXRAD program considerable advances have been made in radar technologies and in the use of weather radar for monitoring and prediction The development of new technologies provides the motivation for appraising the status of the current weather radar system and identifying the most promising approaches for the development of its eventual replacement The charge to the committee was to determine the state of knowledge regarding ground based weather surveillance radar technology and identify the most promising approaches for the design of the replacement for the present Doppler Weather Radar This report presents a first look at potential approaches for future upgrades to or replacements of the current weather radar system The need and schedule for replacing the current system has not been established but the committee used the briefings and deliberations to assess how the current system satisfies the current and emerging needs of the operational and research communities and identified potential system upgrades for providing improved weather forecasts and warnings The time scale for any total replacement

of the system 20 to 30 year time horizon precluded detailed investigation of the designs and cost structures associated with any new weather radar system The committee instead noted technologies that could provide improvements over the capabilities of the evolving NEXRAD system and recommends more detailed investigation and evaluation of several of these technologies In the course of its deliberations the committee developed a sense that the processes by which the eventual replacement radar system is developed and deployed could be as significant as the specific technologies adopted

Consequently some of the committee s recommendations deal with such procedural issues
