Advances In Stereotactic And Functional Neurosurgery 8:

Advances in Stereotactic and Functional Neurosurgery 8 Giovanni Broggi, Juan Burzaco, Edward R. Hitchcock, Björn A. Meyerson, Szabolcs Toth, 2012-12-06 The last ten years has witnessed a resurgence of interest in stereotactic surgery although this has been mainly in the field of the comparatively simple stereotactic biopsy of intracranial tumours There is also evidence of a returning interest in functional neurosurgery other than pain which has always sustained high levels of endeavour The present work comprises selected papers from a much larger group of interesting and important communications to the European Society for Stereotactic and Functional Neurosurgery They represent modern views on a wide variety of stereotactic surgical topics from internationally acclaimed experts in this field The neurosurgeon who has little or no acquaintance with this fruitful sub specialty will be surprised to find very broad applications of the technique which is gradually replacing many conventional neurosurgical procedures This is particularly evident in the papers on tumours but there is also a section on the treatment of vascular disease which marks an extension of neurosurgical practice The Society has always regarded technical advances as important and some of the most recent developments appear in this book Finally an exciting new development of neural transplantation marks the beginning of what may be an important part of neurological surgery in the future

Meyerson,Christoph Ostertag,2012-12-06 This volume contains selected contributions from the XIth Meeting of the European Society for Stereotactic and Functional Neurosurgery held in September 1994 in Antalya/Turkey Most of the papers deal with the many therapeutic and technical advancements made in this field of neurosurgery The emergence of new stereotactic methodologies such as frameless stereotaxy and other forms of neuronavigation have become an indispensable tool for all types of neurosurgical operations An increasing number of young neurosurgeons takes an interest in the neurosurgical approaches to the treatment of movement disorders chronic pain and epilepsy This is a clear sign of the growing awareness of the long neglected fact that these neurosurgical treatments can be offered to large patient populations Neurotransplantation as a novel treatment of Parkinson's disease has paved the way for the application of this technology for other indications The pioneering work performed by the late Edward Hitchcock is reviewed here There is a renewed interest in pallidotomy for dealing with certain forms of Parkinson's disease and certain aspects of this operation are discussed in another paper Progress in the neurosurgical treatment of pain is dealt with by contributions on refined techniques of percutaneous cordotomy DREZ operations and critical evaluations of spinal cord stimulation A novel approach is a report on the experiences of treating cancer pain by intraspinal implantation of chromaffin cells Several contributions cover the important issues of novel techniques for the study of neural dysfunction preoperative monitoring with PET microrecording magnetoencephalography and other techniques *Advances in Stereotactic and Functional Neurosurgery* 4 , *Advances in Stereotactic and Functional Neurosurgery* 6 European Society for Stereotactic
