Advanced Drying Technologies Tadeusz Kudra, Arun S. Mujumdar, 2009-02-11 Presents Drying Breakthroughs for an Array of Materials Despite being one of the oldest most energy intensive unit operations industrial drying is perhaps the least scrutinized technique at the microscopic level Yet in the wake of today's global energy crisis drying research and development is on the rise Following in the footsteps of the wide

Advanced Drying Technologies for Foods Arun S. Mujumdar, Hong-Wei Xiao, 2019-06-19 The goal of all drying research and development is to develop cost effective innovative processes that yield high quality dried products with less energy consumption and reduced environmental impact With the literature on drying widely scattered *Advanced Drying Technologies for Foods* compiles under one cover concise authoritative up to date assessments of modern drying technologies applied to foods This book assembles a number of internationally recognized experts to provide critical reviews of advanced drying technologies their merits and limitations application areas and research opportunities for further development Features Provides critical reviews of advanced drying technologies Discusses the merits and limitations of a variety of food drying technologies Explains drying kinetics energy consumption and quality of food products Reviews the principles and recent applications of superheated steam drying The first four chapters deal with recent developments in field assisted drying technologies These include drying techniques with the utilization of electromagnetic fields to deliver energy required for drying for example microwave drying radio frequency drying electrohydrodynamic drying and infrared radiation drying The remainder of this book covers a wide assortment of recently developed technologies which include pulse drying swell drying impinging stream drying and selected advances in spray drying The final chapter includes some innovative technologies which are gaining ground and are covered in depth in a number of review articles and handbooks and hence covered briefly in the interest completeness This book is a valuable reference work for researchers in academia as well as industry and will encourage further research and development and innovations in food drying technologies

Drying Technologies For Foods: Fundamentals & Applications: Part II Prabhat K. Nema, 2016-03-15 This book part 2 is one more effort to present in a progressive and systematic form the basic knowledge required both for selection and technical design of appropriate drying systems This book consists of 14 chapters which present comprehensive yet concise coverage of different novel drying techniques such as vacuum drying refractance window dehydration technique super critical drying TES assisted solar drying etc This book also covers recent technologies and trends in medicinal herb fruit leather and protein drying as well as packaging of dehydrated foods The mechanism of deliquescence and caking process involved in drying of foods effect of drying on functional properties of foods have been added Different control and safety systems required to improve dryer operation and efficiency and different approaches such as ANN and computer vision that can be used for modelling the drying process are also discussed These chapters are prepared considering the convenience of understanding concepts and aspects of the topics especially by undergraduate and

post graduate students as well as by faculty for teaching purposes There are extensive references to earlier work as well as to recent publications to facilitate the researchers and scientists for their better understanding of the research area Each of the invited contributors in this book has worked extensively in the respective area of drying technology and hence their strong experience in the form of chapter will benefit the readers

Food and Water Security Javid Parray,A. K. Haghi,2026-01-31 This book provides a broad overview of both the global Sustainability of water and food and climate that will have huge impacts on water and food availability Solutions to the food clean water for a current world population of 7 billion are one of the greatest challenges that require technology innovation and changes in public policy As the universities has seen a considerable increase in interdisciplinary environmental courses this research oriented reference book could be a practical guide for scholars interested to gain their knowledge in the area of Environmental Sustainability without a strong background in both fields Considering the fact that the population growth increasing the demand on water and food This new volume is also a valuable guide for professionals with strong interests in interdisciplinary research involving environmental science environmental management and sustainability science This research oriented volume highlights include Introductory chapters for conceptual framework on how to better understand the global sustainability of water and food Case studies to illustrate interconnections among water and food sectors Introduction to engineering solutions that include both soft path and technology innovation methods Case studies for management of water agricultural growth and food security using empirical analyses and technological interventions Case studies to minimize water and food pressures and achieve green growth The book highlights fundamentals of synergy framework on water food and the future of sustainability It illustrates practical concepts for higher level undergraduate and graduate level students Securing water energy and food is a complex challenge and different regions have different stress points There will never be a one size fits all solution However by working together across sectors and geographies we can help minimise conflicts and competition while striving to meet the world s changing needs
