Advances In Prog Non Numerical Computa:

Advances in programming and non-numerical computation Leslie Fox,1969 **Advances in Programming and Non-Numerical Computation** L. Fox,2014-05-16 Advances in Programming and Non Numerical Computation is the third volume of the Proceedings of Summer Schools organized by the Oxford University Computing Laboratory and the Delegacy for Extra Mural Studies The 27 lectures summarized in this volume were from 1963 Summer School The book is organized two parts keeping the theories of programming separate from the uses of programs In the first part an introduction gives a succinct historical account of the development of programming since the invention of the digital computer and the other four chapters discuss the theory and the developing practice of methods of communicating with the computer particularly for non numerical purposes The second provides a summary of possible non numerical work and more detail on three particular applications in theorem proving game playing and learning and information retrieval It is hoped that this book provides a suitable introduction for a final year student seeking interesting research possibilities not too closely connected with his undergraduate work It should also give to the intelligent layman who is prepared to do some non trivial reading ideas about just what a machine can do how it does it and some of the methods and the problems of making further advances
