## **Ecological Data:**

**Ecological Data** William K. Michener, James W. Brunt, 2009-04-01 Ecologists are increasingly tackling difficult issues like global change loss of biodiversity and sustainability of ecosystem services These and related topics are enormously challenging requiring unprecedented multidisciplinary collaboration and rapid synthesis of large amounts of diverse data into information and ultimately knowledge New sensors computers data collection and storage devices and analytical and statistical methods provide a powerful tool kit to support analyses graphics and visualizations that were unthinkable even a few years ago New and increased emphasis on accessibility management processing and sharing of high quality well maintained and understandable data represents a significant change in how scientists view and treat data These issues are complex and despite their importance are typically not addressed in database ecological and statistical textbooks This book addresses these issues providing a much needed resource for those involved in designing and implementing ecological research as well as students who are entering the environmental sciences Chapters focus on the design of ecological studies data management principles scientific databases data quality assurance data documentation archiving ecological data and information and processing data into information and knowledge The book stops short of a detailed treatment of data analysis but does provide pointers to the relevant literature in graphics statistics and knowledge discovery The central thesis of the book is that high quality data management systems are critical for addressing future environmental challenges This requires a new approach to how we conduct ecological research that views data as a resource and promotes stewardship recycling and sharing of data Ecological Data will be particularly useful to those ecologists and information specialists that actively design manage and analyze environmental databases However it will also benefit a wider audience of scientists and students in the ecological and environmental sciences

**Models for Ecological Data** James S. Clark, 2020-10-06 The environmental sciences are undergoing a revolution in the use of models and data Facing ecological data sets of unprecedented size and complexity environmental scientists are struggling to understand and exploit powerful new statistical tools for making sense of ecological processes In Models for Ecological Data James Clark introduces ecologists to these modern methods in modeling and computation Assuming only basic courses in calculus and statistics the text introduces readers to basic maximum likelihood and then works up to more advanced topics in Bayesian modeling and computation Clark covers both classical statistical approaches and powerful new computational tools and describes how complexity can motivate a shift from classical to Bayesian methods Through an available lab manual the book introduces readers to the practical work of data modeling and computation in the language R Based on a successful course at Duke University and National Science Foundation funded institutes on hierarchical modeling Models for Ecological Data will enable ecologists and other environmental scientists to develop useful models that make sense of ecological data Consistent treatment from classical to modern Bayes Underlying distribution theory to algorithm development Many examples and applications Does not

assume statistical background Extensive supporting appendixes Lab manual in R is available separately

**The Interpretation of Ecological Data** E. C. Pielou, 1984-09-06 A detailed introduction to the methods used by ecologists classification and ordination to clarify and interpret large unwieldy masses of multivariate field data Permits ecologists to understand not just mechanically use pre packaged programs for multivariate analysis Demonstrates these techniques using artificial data simple enough for every analytical step to be understood

**Analyzing Ecological Data** Alain Zuur, Elena N. Ieno, Graham M. Smith, 2007-08-29 Which test should I apply During the many years of working with ecologists biologists and other environmental scientists this is probably the question that the authors of this book hear the most often The answer is always the same and along the lines of What are your underlying questions What do you want to show The answers to these questions provide the starting point for a detailed discussion on the ecological background and purpose of the study This then gives the basis for deciding on the most appropriate analytical approach Therefore a better starting point for an ecologist is to avoid the phrase test and think in terms of analysis A test refers to something simple and unified that gives a clear answer in the form of a p value something rarely appropriate for ecological data In practice one has to apply a data exploration check assumptions validate the models perhaps apply a series of methods and most importantly interpret the results in terms of the underlying ecology and the ecological questions being investigated Ecology is a quantitative science trying to answer difficult questions about the complex world we live in Most ecologists are aware of these complexities but few are fully equipped with the statistical sophistication and understanding to deal with them

**Multivariate Analysis of Ecological Data with ade4** Jean Thioulouse, Stéphane Dray, Anne-Béatrice Dufour, Aurélie Siberchicot, Thibaut Jombart, Sandrine Pavoine, 2018-11-08 This book introduces the ade4 package for R which provides multivariate methods for the analysis of ecological data It is implemented around the mathematical concept of the duality diagram and provides a unified framework for multivariate analysis The authors offer a detailed presentation of the theoretical framework of the duality diagram and also of its application to real world ecological problems These two goals may seem contradictory as they concern two separate groups of scientists namely statisticians and ecologists However statistical ecology has become a scientific discipline of its own and the good use of multivariate data analysis methods by ecologists implies a fair knowledge of the mathematical properties of these methods The organization of the book is based on ecological questions but these questions correspond to particular classes of data analysis methods The first chapters present both usual and multiway data analysis methods Further chapters are dedicated for example to the analysis of spatial data of phylogenetic structures and of biodiversity patterns One chapter deals with multivariate data analysis graphs In each chapter the basic mathematical definitions of the methods and the outputs of the R functions available in ade4 are detailed in two different boxes The text of the book itself can be read independently from these boxes Thus the book offers the opportunity to find information about the ecological situation from which a question arises alongside the mathematical properties of methods that can be applied to

answer this question as well as the details of software outputs Each example and all the graphs in this book come with executable R code

*Multivariate Analysis of Ecological Data* Michael Greenacre, Raul Primicerio, 2014-01-09 La diversidad biológica es fruto de la interacción entre numerosas especies ya sean marinas vegetales o animales a la par que de los muchos factores limitantes que caracterizan el medio que habitan El análisis multivariante utiliza las relaciones entre diferentes variables para ordenar los objetos de estudio según sus propiedades colectivas y luego clasificarlos es decir agrupar especies o ecosistemas en distintas clases compuestas cada una por entidades con propiedades parecidas El fin último es relacionar la variabilidad biológica observada con las correspondientes características medioambientales *Multivariate Analysis of Ecological Data* explica de manera completa y estructurada cómo analizar e interpretar los datos ecológicos observados sobre múltiples variables tanto biológicos como medioambientales Tras una introducción general a los datos ecológicos multivariantes y la metodología estadística se abordan en capítulos específicos métodos como aglomeración clustering regresión biplots escalado multidimensional análisis de correspondencias simple y canónico y análisis log ratio con atención también a sus problemas de modelado y aspectos inferenciales El libro plantea una serie de aplicaciones a datos reales derivados de investigaciones ecológicas además de dos casos detallados que llevan al lector a apreciar los retos de análisis interpretación y comunicación inherentes a los estudios a gran escala y los diseños complejos

**Online Ecological and Environmental Data** Virginia Ann Baldwin, 2014-06-23 Discover important Internet resources for research data made public individually and collectively by researchers from a variety of entities in the fields of environmental studies and ecology *Online Ecological and Environmental Data* explores innovative projects from a diverse array of institutions that have made environmental and ecological research information freely available online You will find a wealth of Web site listings with URLs and complete descriptions data field descriptions controlled vocabulary examples and Web screen shots that demonstrate how to use a specific site The book will help you locate the data procedures instruments notes and other descriptive information that scientists and engineers need for replicating and building on the research of others With *Online Ecological and Environmental Data* you will gain a better understanding of the cooperative design development and management of interdisciplinary data cataloging multidisciplinary environmental data data networking new developments in information science and technology extracting and compiling data the convergence and dissemination of information via the Internet This unique resource explores the potential of distributing actual research data on the Web The information you will find in this book will enable science and technology librarians to provide effective access to library patrons *Online Ecological and Environmental Data* will give librarians and other information specialists as well as faculty and students in library sciences and technology cutting edge knowledge to meet the global data and information needs of the scientific community The projects described in this book can serve as models for other disciplines especially for the various aspects of handling data made available online and for making this data more available and usable on the Internet for researchers and students
