Ecologic Architecture:

Ecologic Architecture Richard L. Crowther,1992 Air quality energy conservation and the preservation of the earth s ecosystem are the main principles demonstrated in this book through design guidelines examples and case studies The scope of the book includes everything from planning and landscaping to product selection and systems design *Culture, Architecture and Nature* Sim Van der Ryn,2013-10-30 Gathering his most compelling essays and addresses from the last fifty years in one accessible volume this book looks at the pioneering ideas that underpin Sim Van der Ryn s ecological design philosophy It offers a unique decade by decade retrospective of the key issues in environmental design beginning with the most recent years and looking back to the 1960s With an introductory chapter and further recommended reading for each decade this book is key reading for any architect or designer practising today and students will find a wealth of knowledge with which to support their studies The author s beautiful illustrations painted in a corresponding timescale to the chapters offer further insight into the way he understands the challenges of humanity s stewardship of our planet **Green Architecture** Michael J. Crosbie,1994 [Buildings Are for People](#) Bill Caplan,2016-04-30 Buildings are for People Human Ecological Design offers a new approach to the process of conceiving architectural design one that considers the interactions of the built environment with people and the natural environment The book exposes our visceral and experiential connections to buildings and how buildings intervene directly with our ecosystem natural environment and sense of place It brings to light our ability to utilize a building s surfaces shape and materiality to synergize with the energy and forces of nature for a more green and sustainable architecture It points out many of the roadblocks to successful design including issues in education the profession regulation and the industry s institutions providing an awareness that heretofore is rarely discussed Most importantly Buildings are for People Human Ecological Design highlights the obvious that buildings are built for people a fact that seems to have been overlooked in the last half century *Architecture and the Future* Association of Collegiate Schools of Architecture. Annual Meeting,1985 [Zero-Energy Buildings](#) Jesus Alberto Pulido Arcas,Carlos Rubio-Bellido,Alexis Pérez-Fargallo,Ivan Oropeza-Perez,2020-12-16 The building industry is one of the largest energy consumers and countries all over the world are striving to design buildings that satisfy the user s expectations while containing their energy consumption In this context zero energy buildings have emerged as a technological paradigm that can solve this global issue but its implementation in different contexts has brought a profound debate about its technical social and environmental limitations Thanks to contributions from a variety of scholars from different countries this book explores different aspects of the zero energy buildings and gives the reader a broad view of the feasibility of implementation in different contexts *An Integrated Approach to Environmental Management* Dibyendu Sarkar,Rupali Datta,Avinandan Mukherjee,Robyn Hannigan,2015-09-30 Covers the most recent topics in the field of environmental management and provides a broad focus on the theoretical and methodological underpinnings of environmental management Provides an up to

date survey of the field from the perspective of different disciplines Covers the topic of environmental management from multiple perspectives namely natural sciences engineering business social sciences and methods and tools perspectives Combines both academic rigor and practical approach through literature reviews and theories and examples and case studies from diverse geographic areas and policy domains Explores local and global issues of environmental management and analyzes the role of various contributors in the environmental management process Chapter contents are appropriately demonstrated with numerous pictures charts graphs and tables and accompanied by a detailed reference list for further readings

Soupergreen! Doug Jackson,2021-06-21 SOUPERgreen features projects and essays that offer a long overdue critique of the current approach to green architecture and in turn demonstrate a more appropriate way for architects to address the challenges posed by the environmental crisis In sharp contrast to contemporary examples of green or sustainable architecture which primarily rely upon the invisible agency of unremarkable technologies and materials to reduce resource consumption but which do so without producing a necessary shift in the public s perception of the environment or behavior towards it SOUPERgreen demonstrates how green technology can not only perform from a measurable standpoint but can also produce engaging experiences that profoundly alter enhance and transform the public s understanding of the environment By leveraging the inherently expressive nature of technology in order to dramatize the constantly negotiated relationship between humanity and the natural world the souped up green architecture featured in SOUPERgreen transforms greenness from a mere measurement of environmental performance into an actively engaged and highly conscious lived reality resulting in a new way of experiencing and understanding the environment that is inherently more ecological Includes a foreword by Sanford Kwinter

Regenerative Principles in Facilities Design and Urban Re-modeling in Developing Countries Bukola Adejoke Adewale,Babatunde Fatai Ogunbayo,Clinton Ohis Aigbavboa,2026-03-04 In the face of rapid urbanization and environmental challenges the developing world stands at a crossroads Conventional sustainable design often modelled on Global North precedents is proving insufficient to address the deep seated infrastructural and socio economic complexities of these unique contexts This book argues for a radical shift from simply minimizing harm to actively healing and restoring our communities and ecosystems through regenerative architecture Moving beyond theory this work provides a critical and practical roadmap for applying regenerative principles specifically in the challenging environments of developing nations We delve into the core of what makes regeneration different showcasing how it can produce net positive energy and water systems enhance biodiversity foster social equity and create economic value where it is needed most The heart of this book lies in its actionable insights and real world evidence Through a series of detailed case studies from innovative adaptive reuse in Ghana and decentralized renewable systems in

Rwanda to community driven projects in South Africa we demonstrate viable solutions These are contrasted with lessons from pioneering examples in Sweden the UK and Canada not as blueprints to copy but as sources of adaptable strategies A significant focus is given to a deep dive case study of Nigeria offering a nuanced examination of its colonial architectural legacy current urban pressures and the emergent regenerative strategies that blend vernacular wisdom with modern innovation This book is more than a reference it is a call to action It provides policymakers with frameworks for supportive regulations offers practitioners design strategies and performance metrics and equips students and researchers with a comprehensive conceptual foundation By championing an approach that is both context sensitive and aspirational this book serves as an essential guide for anyone committed to building resilient vibrant and equitable urban futures in the developing world and beyond *Art, Engineering, Science, and the Environment*, 1994 **Sustainable Cities Development and Environment Protection IV** Guang Fan Li, Chao He Chen, Bi Feng Jiang, Qi Zhong Shen, 2014-07-04 Selected peer reviewed papers from the 4th International Conference on Civil Engineering Architecture and Building Materials CEABM 2014 May 24 25 2014 Haikou China **Holistic Ecologic Architecture** Richard L. Crowther, 1996* Sun earth air and water sustainable energies have been primary to Crowther's holistic integration of land forms landscaping architecture interior and human physiologic psychoneural and behavioral sensitivities and responses **Tall Wood Buildings** Michael Green, Jim Taggart, 2020-03-09 Tall wood buildings have been at the foreground of innovative building practice in urban contexts for a number of years From London to Stockholm from Vancouver to Melbourne timber buildings of up to 20 storeys have been built are under construction or being considered This dynamic trend was enabled by developments in the material itself prefabrication and more flexibility in fire regulations The low CO2 footprint of wood often regionally sourced is another strong argument in its favour This publication explains the typical construction types such as panel systems frame and hybrid systems An international selection of 13 case studies is documented in detail with many specially prepared construction drawings demonstrating the range of the technology **Construction Index**, 1997 *Ecological Living* Dominique Gauzin-Müller, Cité de l'architecture et du patrimoine (Paris, France), Institut français d'architecture, 2009 The pioneers of ecological architecture today are necessarily researchers as much as architects in any conventional sense of the term Sustainability is the key criterion in this field and ecologically sound solutions for the designs of homes are the key challenge homes the most commonly built structure Ecological Living assesses a selection of some recently built ecological habitats collecting several built examples from a variety of French architects examining precursors such as Frank Lloyd Wright Alvar Aalto and Pierre Lajus plus proposals for European architects and architecture students and inquiries into the ecological viability of detached housing and tower blocks The book is structured in thematic chapters such as Why is Action So Urgent The Precursors of Eco Responsible An International Panorama of the State of the Art and Into Action [Beyond Sustainable](#) Ryan Ludwig, 2020-12-21 [Beyond Sustainable](#) discusses the relationship between human beings and the constructed

environments of habitation we create living in the Anthropocene an increasingly volatile and unpredictable landscape of certain change This volume accepts that human beings have reached a moment beyond climatological and ecological crisis It asks not how we resolve the crisis but rather how we can cope with or adapt to the irreversible changes in the earth system by rethinking how we choose to inhabit the world ecology Through an examination of numerous historical and contemporary projects of architecture and art as well as observations in philosophy ecology evolutionary biology genetics neurobiology and psychology this book reimagines architecture capable of influencing and impacting who we are how we live what we feel and even how we evolve Beyond Sustainable provides students and academics with a single comprehensive overview of this architectural reconceptualization which is grounded in an ecologically inclusive and co productive understanding of architecture Earthword ,1994 **Urban Green** Neil B. Chambers,2011-07-05 Sustainable design is booming but the men and women dedicated to reducing their carbon impact have lost sight of what they are trying to save the natural world Author Neil Chambers has been at the forefront of cutting edge sustainable architecture for years and Urban Green is his revolutionary vision for bringing the power of the conservation and design movements together He advocates looking to nature for the missing components of the green revolution oysters that can clean water at up to 5 liters an hour beavers that reshape their environments while simultaneously enriching ecosystems and mountains that offer a new way of imagining how a city could be built By designing our homes and cities in harmony with the natural world we can take the next step in the sustainable revolution **The Greening of Architecture** Phillip James Tabb,A. Senem Deviren,2017-03-02 Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative environmental effects caused by buildings urban designs and settlements Describing the progressive development of green architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in response to them followed by an historic perspective of the pioneering evolution of green technology and architectural integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by significant world events climate change environmental theories movements in architecture technological innovations and seminal works in architecture and planning throughout each decade over the past fifty years This time period is bounded on one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end the

pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design land use planning transportation agriculture and energy production found in the 2000 s The greening process moves from remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and accumulative content of greening principles in architecture
