Broadband Satellite Communications For Internet Access:

Broadband Satellite Communications for Internet Access Sastri L. Kota, Kaveh Pahlavan, Pentti A.

Leppänen, 2003-11-30 Broadband Satellite Communications for Internet Access is a systems engineering methodology for satellite communication networks. It discusses the implementation of Internet applications that involve network design issues usually addressed in standard organizations. Various protocols for IP and ATM based networks are examined and a comparative performance evaluation of different alternatives is described. This methodology can be applied to similar evaluations over any other transport medium. Satellite Communications Network Design and Analysis Kenneth Y. Jo, 2011

This authoritative book provides a thorough understanding of the fundamental concepts of satellite communications, SATCOM network design and performance assessments. You find discussions on a wide class of SATCOM networks using satellites as core components as well as coverage key applications in the field. This in-depth resource presents a broad range of critical topics from geosynchronous Earth orbiting GEO satellites and direct broadcast satellite systems to low Earth orbiting LEO satellites, radio standards and protocols. This invaluable reference explains the many specific uses of satellite networks including small terminal wireless and mobile communications systems. Moreover, this book presents advanced topics such as satellite RF link analyses, optimum transponder loading on board processing, antenna characteristics, protected systems, information assurance and spread spectrums. You are introduced to current and future SATCOM systems and find details on their performance supportabilities. This cutting-edge book also presents trends in multimedia satellite applications and IP services over satellites. *Satellite Communications* Timothy Pratt, Jeremy E. Allnut, 2019-10-08

Extensive revision of the best-selling text on satellite communications includes new chapters on cubesats, NGSO satellite systems and Internet access by satellite. There have been many changes in the thirty-three years since the first edition of *Satellite Communications* was published. There has been a complete transition from analog to digital communication systems with analog techniques replaced by digital modulation and digital signal processing. While distribution of television programming remains the largest sector of commercial satellite communications, low earth orbit constellations of satellites for Internet access are set to challenge that dominance. In the third edition, chapters one through three cover topics that are specific to satellites including orbits, launchers and spacecraft. Chapters four through seven cover the principles of digital communication systems, radio frequency communications, digital modulation and multiple access techniques and propagation in the earth's atmosphere, topics that are common to all radio communication systems. Chapters eight through twelve cover applications that include non-geostationary satellite systems, low throughput systems, direct broadcast satellite television, Internet access by satellite and global navigation satellite systems. The chapter on Internet access by satellite is new to the third edition and each of the chapters has been extensively revised to include the many changes in the field since the publication of the second edition in 2003. Two appendices have been added that cover digital transmission of analog signals and antennas. An invaluable resource.
