Five national engineering societies, the American Society of Civil Engineers, the American Institute of Mining, Metallurgical, and Petroleum Engineers, the American Society of Mechanical Engineers, the American Institute of Electrical Engineers, and the American Institute of Chemical Engineers, have an arrangement with the McGraw-Hill Book Company, Inc., for the production of a series of selected books judged to possess usefulness for engineers and industry. The purpose of this arrangement is: to provide monographs of high technical quality within the field of engineering; to remove from obscurity important technical manuscripts which might not be published commercially because of low expected sale without special introduction; to develop manuscripts to fill gaps in existing literature; to collect into one volume scattered information of regional usefulness on a given subject. The societies assume no responsibility for any statements made in these books. Each book before publication has, however, been examined by one or more representatives of the societies competent to express an opinion on the merits of the manuscript.

Coupled Instabilities In Metal Structures 2000 (Cims 2000) Dinar Camotim,Dan Dubina,Jacques Rondal,2000-08-21 The subject of coupled instabilities is a fascinating field of research with a wide range of practical applications particularly in the analysis and design of metal structures Despite the excellent body of existing results concerning coupled instability structural behaviour this situation has not yet been adequately translated into design rules or specifications In fact only to a small extent do modern design codes for metal structures take advantage of the significant progress made in the field This book which contains all the invited general reports and selected papers presented at the Third International Conference on Coupled Instabilities in Metal Structures CIMS 2000 should provide a meaningful contribution towards filling the gap between research and practice Guide to Stability Design Criteria for Metal Structures Structural Stability Research
