Lubzens, M.R. Miracle, 2012-12-06 As in previous symposia some current research topics were selected for review and eight invited papers were presented For the first time a paper was presented on the historical aspects of Rotiferology covering European research between 1680 1950 A special workshop session was devoted to a debate on a controversial topic Rotifer Phylogeny The workshop resulted in a very successful discussion and the integration of scattered evidence and hypotheses on the phylogenetic origin of rotifers the relationships between major rotifer groups and the mechanisms of evolution *The Invertebrates* R. S. K. Barnes, Peter P. Calow, P. J. W. Olive, D. W. Golding, J. I. Spicer, 2009-04-13 The majority of undergraduate texts in invertebrate zoology of which there are many fall into one of two categories They either offer a systematic treatment of groups of animals phylum by phylum or adopt a functional approach to the various anatomical and physiological systems of the better known species The *Invertebrates* is the first and only textbook to integrate both approaches and thus meet the modern teaching needs of the subject This is the only invertebrate textbook to integrate systematics and functional approaches The molecular systematics sections have been completely updated for the new edition Strong evolutionary theme which reflects the importance of molecular techniques throughout Distills the essential characteristics of each invertebrate group and lists diagnostic features to allow comparisons between phyla New phyla have been added for the new edition Stresses comparisons in physiology reproduction and development Improved layout and illustration quality Second edition has sold 14000 copies Nature of the first edition Students will like this book It deserves to succeed **Biology of Invertebrate and Lower Vertebrate Collagens A.** Bairati, 2013-03-08 Knowledge in the field of the biology of the extracellular matrix and in particular of collagen has made considerable progress over the last ten years especially in mammals birds and In man with respect to very important applied medical aspects Basic knowledge in the animal kingdom overall has increased more slowly and haphazardly We therefore considered it useful to organize a meeting specifically devoted to the study of the invertebrate and lower vertebrate collagens

The NATO Scientific Division financed an Advanced Research Workshop aimed at bringing together experts qualified in collagen biology with morphological biochemical and genetic specialization with researchers who are currently studying collagenous tissues of invertebrates and lower vertebrates The Medical Biology Committee of the CNR Rome and the University of Milan also supplied interest and support for the organization of this Meeting The format of the workshop consisted in 1 main lectures on the most recent aspects of collagen biology 2 minireviews on the current knowledge of collagenous tissues in the various invertebrate phyla and in fish 3 contributed papers on particular aspects of research in specific fields 4 workshops on the methodology of studying collagen As we had intended the Workshop gave a comprehensive overview of acquired knowledge and of the present state of research activity It permitted wide interdisciplinary discussion enabling collaborations to be established and new research themes to be chosen This volume contains the text of all the contributions presented at the Meeting including posters
