Morrison-Low, 2017-03-02

At the start of the Industrial Revolution it appeared that most scientific instruments were made and sold in London but by the time of the Great Exhibition in 1851 a number of provincial firms had the self confidence to exhibit their products in London to an international audience How had this change come about and why This book looks at the four main and two lesser English

centres known for instrument production outside the capital Birmingham Liverpool Manchester and Sheffield along with the older population centres in Bristol and York Making wide use of new sources Dr Morrison Low curator of history of science at the National Museums of Scotland charts the growth of these centres and provides a characterisation of their products New information is provided on aspects of the trade especially marketing techniques sources of materials tools and customer relationships From contemporary evidence she argues that the principal output of the provincial trade with some notable exceptions must have been into the London marketplace anonymously and at the cheaper end of the market She also discusses the structure and organization of the provincial trade and looks at the impact of new technology imported from other closely allied trades By virtue of its approach and subject matter the book considers aspects of economic and business history gender and the family the history of science and technology material culture and patterns of migration It contains a myriad of stories of families and firms of entrepreneurs and customers and of organizations and arms of government In bringing together this wide range of interests Dr Morrison Low enables us to appreciate how central the making selling and distribution of scientific instruments was for the Industrial Revolution

Instrumental in War Steven Walton, 2005-05-01 Scientific research and instrumentation are crucial for military action today but they have not always been so This collection investigates 500 years of the relationship between warfare research and instruments both physical and intellectual to understand this interaction With U S English and French examples contributors provide examples from army and naval history to show how governments and individuals made warfare scientific developing instruments stations and organizations that furthered the cause Some developments directly aided war efforts others were parts of normal science in peacetime and others were relatively ineffective in directly bringing about military change These developmental histories shed light on the origins of modern scientific warfare Contributors Steven A Walton William A Lynch Jamel Ostwald Seymour H Mauskopf James R Fleming Gerard P Scharfenberger William M McBride David Alan Grier Sebastien Soubiran Kenton Kroker Deborah J Warner Peter Galison
