Beginnings Of Semantics:

The Beginnings of Semantics Michel Bréal, 1991 *A History of Semantics* W. Terrence Gordon, 1982 In this monograph the author outlines for the first time in the history of linguistics the development of the study of meaning from the pioneering work of Christian Karl Reisig 1792 1829 Friedrich Haase 1808 1867 Ferdinand Heerdegen 1845 1930 Ars ne Darmesteter 1846 88 and Michel Bréal 1832 1915 in the 19th century to the work done by 20th century scholars such as Saussure Antoine Meillet Albert Carnoy Charles Kay Ogden Ivor Armstrong Richards Gustaf Stern Jost Trier Leo Weisgerber Bloomfield John Rupert Firth Rudolf Hallig Walter von Wartburg Georges Mator Eugene Anderson Nida Pierre Guiraud and the late Uriel Weinreich to mention just the most important figures whose work is discussed in the book **A Concise History of**

Linguistic Semantics I Victor Raskin, 1983 *Subjectivity and Perspective in Truth-theoretic Semantics* Peter Laserson, 2017 This book explores linguistic and philosophical issues presented by sentences expressing personal taste such as Roller coasters are fun and examines how truth theoretic semantics can account for expressions of this type It provides a detailed and explicit formal grammar paired with semantic analysis and pragmatic theory *Essays Towards a History of Semantics* Peter Schmitter, 1990 *Application and Theory of Petri Nets and Concurrency* Raymond Devillers, Antti Valmari, 2015-06-03 This book constitutes the proceedings of the 36th International Conference on Application and Theory of Petri Nets and Concurrency PETRI NETS 2015 held in Brussels Belgium in June 2015 The 12 regular papers and 2 tool papers presented in this volume were carefully reviewed and selected from 34 submissions In addition the book contains 3 invited talks in full paper length The papers cover various topics in the field of Petri nets and related models of concurrency

Studies in Honor of Hermann Collitz ... Hermann Collitz, 1930 **Intelligent Tutoring Systems for Foreign Language Learning** Merryanna L. Swartz, Masoud Yazdani, 2012-12-06 Multilingual communication within the world community is important for economic political and cultural interactions In a global environment where other languages are increasing in importance in addition to recognized international standards i e English and French language learning is becoming more important for improved international relations At the same time recent advances in instructional technology make the promise of building intelligent tutoring systems in advanced technology laboratories to teach these language skills a reality in the near future These tutoring systems therefore may help us foster improved methods for acquiring languages As active language learners and instructional technology researchers we felt an international meeting with similar individuals was needed to discuss how such advanced tutoring systems are to be designed and implemented We held such a meeting the results of which are presented in this volume The purpose of this Advanced Workshop sponsored by the NATO Scientific Affairs Division was to bring together a multidisciplinary group of researchers who were active in the development of intelligent tutoring systems for foreign language learning Participants came from computer science computational linguistics psychology and foreign language learning Washington D C was selected for the Workshop site since it is Merryanna's home

city the capitol of the United States and an international multilingual community in its own right Masoud agreed to the location with a promise to be shown the White House and graciously volunteered to coordinate activities from the European side

Lectures on the Study of Language Hanns Oertel,1901 Old English Semantic-field Studies Victor L. Strite,1989

This book describes and analyzes all published unpublished and in progress studies of Old English semantic fields Thirty seven fields such as gloom nobility sea and weapon terms are examined for anyone interested in Anglo Saxon England from virtually any perspective The work also describes historical patterns in this area of scholarship and correlates related activity in modern literary criticism and semantics It helps established scholars and beginners alike to know what has been written about a particular semantic field or segment of the Old English vocabulary and where to find the studies It shows attempts by scholars over the decades to discover both basic definitions and lost nuances of the Old English especially poetic vocabulary and to refine our understanding of how the Anglo Saxons perceived the world around them We get a glimpse of a very rich vocabulary and increasingly skillful attempts by scholars to appreciate the intricacy and depth of Anglo Saxon expression

The Integration of Human Knowledge Oliver Leslie Reiser,1958 **Semantic Theories in Europe, 1830-1930** Brigitte Nerlich,1992 It is widely believed by historians of linguistics that the 19th century was largely devoted to historical and comparative studies with the main emphasis on the discovery of soundlaws Syntax is typically portrayed as a mere sideline of these studies while semantics is seldom even mentioned If it comes into view at all it is usually assumed to have been confined to diachronic lexical semantics and the construction of some mostly ill conceived typologies of semantic change This book aims to destroy some of these prejudices and to show that in Europe semantics was an important although controversial area at that time Synchronic mechanisms of semantic change were discovered and increasing attention was paid to the context of the sentence to the speech situation and the users of the language From being a semantics of transformations a child of the biological geological paradigm of historical linguistics with its close links to etymology and lexicography the field matured into a semantics of comprehension and communication set within a general linguistics and closely related to the emerging fields of psychology and sociology

Linguistics and Language Behavior Abstracts ,2006 **Essays in the History of Logic and Logical Philosophy** Jan Woleński,1999 **The Semantic Predecessors of Need in the History of English (c750-1710)** Lucía Loureiro-Porto,2009-09-28 In the history of English at least five verbs have been found to mean need urfan be urfan need behove and mister By adopting a corpus based approach this book studies all of them diachronically from the origins of the language c 750 to the end of the early Modern English period 1710 Offers a detailed analysis of the meaning of these five verbs which have been found to mean need filling a gap in the literature on modality and shedding new light on grammaticalization theory Spans the period c 750 to 1710 adopting a corpus based approach to study the verbs diachronically Explores the evolution of necessity meanings in English identifying regular semantic changes and challenging some well established statements Provides a detailed grammaticalization analysis paying

attention to the different Present Day English modal classes including marginal and emerging modals

Reference and Beyond Michael Devitt, 2025-07-20 In Reference and Beyond Michael Devitt explores philosophy of language from a naturalistic approach A dominant theme of this book is the semantics of proper names definite descriptions and demonstratives It shows that these terms have conventional referential uses to express singular thoughts Those uses are explained by a unified causal theory a term's reference is largely fixed in an object by a causal link between the person and the object when it is or was the focus of that person's perception Furthermore Devitt argues that a term's meaning is its largely causal mode of reference So a related theme is the rejection of the direct reference view that the meaning of a name is its bearer Another theme in Reference and Beyond concerns thoughts and their ascriptions including de se thoughts and Kripke's Paderewski puzzle Devitt approaches the semantics of ascriptions from a perspective on thoughts thus according with the slogan Put Metaphysics First that governs the author's approach to all philosophical problems A further framework is naturalism Languages are parts of the spatio-temporal world playing causal roles in virtue of certain properties meanings The task of a theory of language is then to explain the nature of those causally significant properties The book takes a very dim view of the popular idea that propositions have a place in explanations of meanings The naturalism leads to a rejection of the received view that theories of language must rest on an evidential base of speakers' intuitions and to a search for a respectable empirical base

Programming Concepts and Methods M. Broy, Cliff B. Jones, 1990 The papers presented in this book were originally presented at a conference organized jointly by IFIP working groups 2.2 and 2.3 The titles of the groups are Formal Description of Programming Concepts and Programming Methodology respectively There is no formal division between these two areas The papers here which relate to fundamental notions and notations reflect current issues in formal semantic description Programming methods use such description languages but are also concerned with methods of developing implementations which can be shown to satisfy their specifications Members of both working groups have an interest in mechanical support for the task of proving theorems and the book includes several papers relating to such systems or their underlying logical frameworks
