

FIG. 47—Early form of station wall set equipped with a pair of telephones; one for talking, the other for listening. This set contained the polarized ringer and magneto-generator, the crank of which may be seen below the center of the box. Above the ringer gongs is the toothed lightning arrester. The switch at the bottom of the set changed the circuits from the "calling" to the "talking" arrangement.

Written with the full cooperation of the Bell interests and solidly based upon primary documents *Beginnings of Telephony* concentrates on the technical rather than business aspects of telephony and carries the study to the middle 1890s. Detailing the inception of the telephone microphone transmitter telephone cable first underground cables loaded lines telephone switchboards and long distance lines this standard reference provides a solid insight into the formative decades of the telephone.      *The Telephone and Its Several Inventors* Lewis Coe,2006-01-31 On March 7 1876 the U S Patent Office issued to a young inventor named Alexander Graham Bell what is arguably the most valuable patent ever entitled improvements in telegraphy in truth it secured for Bell the basic principles involved in a telephone. On the same day that Bell filed his patent application a caveat a preliminary patent document was filed by Elisha Gray. This coincidence sparked the first of many debates over whether Bell was the true inventor of the telephone. In the early 1860s Johann Phillip Reis developed a version of the instrument but his claims against Bell were hampered by the bungling of his lawyers in demonstrating his instrument in court. This work is a first look at the many men who developed the telephone and an

examination of their claims against Bell's patent. A lay description of the phone is also provided as well as a history of the development of the telephone system. The Worldwide History of Telecommunications Anton A. Huurdeman, 2003-07-31
