**Behavioral Aspects of Pediatric Burns** Kenneth J. Tarnowski, 2013-06-29 In recent years considerable professional attention has centered on the behavioral aspects of various childhood illnesses and injuries Indeed child health psychology has grown exponentially over the past decade One index of this growth is found in the number of texts that have recently appeared in the area Gross Karoly 1988 Krasnegor Arasteh Levine Carey Crocker Routh 1988 Russo Tuma 1982 Varni 1983 In general these texts provide summaries of the psychological literature across a variety of established e g oncology and emerging psychoneuroimmunology areas of child health Until recently many books on the psychological aspects of pediatric health provided no or minimal information about the psychosocial plight of child burn victims In some instances pediatric burns might be mentioned parenthetically as another example of a population for which behavioral treatment procedures e g pain management may be of value In part the relative inattention devoted to this population may be related to the perception that the literature in this area is sketchy and characterized by significant methodological and substantive shortcomings In many instances this perception is largely justified However it is also the case that the pediatric burn literature has evolved considerably over the past decade and that the incidence of and morbidity associated with severe burn injuries mandates immediate and increased attention by mental health professionals
