Cardiovascular Behavioral Medicine Shari Waldstein, Willem Kop, Leslie Katzel, 2016-01-14 Cardiovascular disease is the leading cause of morbidity and mortality in the United States and most other westernized nations It is well recognized that traditional risk factors for cardiovascular disease have limited predictive utility in the identification of new cardiovascular disease cases and outcomes Thus investigators have argued that application of a biopsychosocial research paradigm in this field may be of particular utility in understanding cardiovascular disease pathogenesis Accordingly a subdiscipline within the field of behavioral medicine cardiovascular behavioral medicine examines interrelations among biological behavioral psychological and social factors in cardiovascular health and disease In 1989 Schneiderman and colleagues published a seminal work entitled Research Methods in Cardiovascular Behavioral Medicine Since that time there has been an exponential increase in the amount and scope of work in this topic area but no similar edited volume has been undertaken Here we propose to create a compendium of work in the field of cardiovascular behavioral medicine the purposes of which are to summarize research in this area promote multidisciplinary research and clinical practice and encourage researchers and clinicians to consider all relevant facets of the disease process in their evaluation and study of cardiovascular disease pathogenesis and outcomes In this volume we propose several sections Section I will provide an overview of basic cardiovascular anatomy and physiology cardiovascular disease classification and application of the biopsychosocial model to the study of cardiovascular disease Section II will cover sociodemographic behavioral psychosocial biomedical and psychophysiological risk factors for cardiovascular disease Each chapter will offer a discussion of construct definition measurement issues and epidemiological evidence for relations to cardiovascular disease Chapters on biomedical and psychophysiological risk factors will also describe sociodemographic behavioral and psychosocial correlates of these risk factors Section III will summarize literature on biopsychosocial investigation of specific cardiovascular disease entities the evidence base for relevant biopsychosocial interventions and evaluation of the impact of cardiovascular diseases on behavior Section IV will cover select special topics in the field of cardiovascular behavioral medicine including common comorbidities special populations special issues and data analytic issues This volume is unique in

several respects First there is no similar work available in terms of the scope of topic coverage Second the inclusion of relevant measurement issues and construct definitions of a comprehensive set of risk factors will be of great assistance to researchers and clinicians in this area who wish to improve their assessment of these variables yet are not familiar with or trained in the various methodologies Third the use of multidisciplinary contributors will greatly enhance the utility of the work The primary audiences for this work are multidisciplinary researchers clinicians and students in cardiovascular behavioral medicine or behavioral medicine more broadly Representative disciplines include psychology psychiatry medicine nursing and epidemiology The prospective authors listed below represent each of these disciplines

Behavioral Aspects of Cardiovascular Disease Alvin Philip Shapiro, Andrew Baum, 1991 Smoking diet stress coping and exercise among other behaviors and psychological states are now clearly implicated in the development of cardiovascular diseases Prevention based largely on altering behaviors that contribute to this chronic disease is now as important a goal as is treatment of those already afflicted This volume based on a recent meeting of the Academy of Behavioral Medicine Research addresses several important areas of research in the general area of cardiovascular disease The topics covered reflect on important aspects of this phenomenon such as the long term development of coronary artery disease central nervous system CNS regulation of blood pressure heart rate and sympathetic tone playing a pivotal role in sympathetic activity and hypertension learned blood pressure modulation and baroreceptor activation as a means of reducing the aversiveness of stress or noxious stimulation and the notion that symptoms of heart disease or infarction may occur in the absence of organic heart disease Having been impressed by the recent advances in the field the editors of this book capture the wealth of newly acquired knowledge about behavioral factors in cardiovascular disease and how the body's nervous endocrine and cardiovascular systems work together

preventive risk reducing measures Highly sophisticated diagnostic instrumentation surgical procedures and emergency medical care have undoubtedly contributed greatly to the trend of declining mortality from cardiovascular events In the course of the extensive research efforts associated with this area it has become increasingly apparent that the identified coronary risk factors share the common element of lifestyle as a major determiner of health behaviors associated with these factors Further it is suspected that behavioral and environmental factors may play a significant contributory role toward the etiology and progression of arteriosclerosis through their effects on the central and peripheral nervous systems and associated neurohormonal response Considerable research effort has been devoted to identifying the risks associated with smoking elevated blood pressure and serum cholesterol Research development and modification is being vigorously pursued Behavioral research exploring the role of psychological stress factors social support networks stressful life events and the Type A/B behavior patterns has uncovered potentially meaningful associations between behavioral factors and arteriosclerosis as discussed in the succeeding chapters of this book
