*High-tech Betrayal* Victor Gary Devinatz, 1999 High Tech Betrayal is the first comprehensive study of life and work in an American high tech factory Victor Devinatz uses both research and personal experience as a shop floor organizer to dispel the popular belief that high tech industries offer positive employment alternatives for those seeking to escape jobs in the declining industries While many believe that the light manufacturing work of high tech industries is preferable to heavy industrial work Devinatz attacks these misconceptions by exposing some of the myths that such work offers more promotional opportunities requires higher skill levels and is better paying Devinatz demonstrates that U S high tech factories of the late twentieth century are much like the industrial sweatshops of the late nineteenth and early twentieth centuries where poorly paid workers toiled in the shadows of brutal foremen without the benefits of union protection Devinatz argues that instead of creating exciting work environments of the future high tech firms are marching boldly into the past

*High-technology Crime* Kenneth S. Rosenblatt, 1995 This book provides law enforcement investigators corporate investigators prosecutors and corporate counsel with step by step procedures for investigating cases that involve computers The book uses the term high technology crime to identify two types of crime associated with high technology First the term includes new crimes created by society's widespread use of computers for example the crime of breaking and entering into computers flourished after businesses began connecting computers to sophisticated telecommunications networks High technology crime also includes traditional crimes so transformed by computer technology that investigators handling such cases must be familiar with computers and the high technology industry One chapter discusses basic principles common to investigating high technology crime and three chapters examine the most common high technology crimes theft of components computer intrusion and theft of information These three chapters provide readers including those with no technical background or competence with the necessary technical information to investigate those crimes along with a procedure for doing so An appendix contains a checklist for these investigations The second part of the book examines a growing challenge facing every law enforcement agency in the United States safely and legally obtaining evidence stored within computers Obtaining evidence from a

computer without damaging equipment or losing data is just one part of the problem there are also substantial legal hurdles to searching and seizing computer evidence Few courts have applied the Fourth Amendment to searches for computer evidence which means that the law in this area remains unclear Three chapters discuss the legal obstacles to searching and seizing computer evidence and suggest how readers can draft search warrants to surmount those obstacles A diskette contains investigative checklists and sample search warrant language Appended introduction to computer technology and an article on how to protect trade secrets from disclosure during a criminal prosecution along with a sample protective order to be used for that purpose

**Intangibles in the Big Picture** Gary Zatzman, Rafiqul Islam, 2009 The so called TINA syndrome provides the fundament the actual rock on which the political economic military and other elites and establishments of the Anglo American world and European bloc have built their church Inscribed over its entrance stands the motto there is no god but monopoly and maximum is his profit On this basis continuous attacks on the very concept of intangibles are launched most prominently against time consciousness Especially singled out is time consciousness based on appreciating and or prioritising the long term over the short term as well as placing the interests of the social collective over the interests of any individual member of the collective In this book it is argued that Humanity has been on the wrong track since Sir Isaac Newton published his Principia Mathematica at the end of the 17th century and that the scientific research enterprise developed since then has taken the world on a merry chase to nowhere Without exception the assaults on time consciousness and on cognition of what happens in and through the passage of time take the form of a denial of the principle of Nature as the Mother of all wealth The denial of this principle has always encountered resistance Some resist by breaking the attacks down and responding to selected cases For example the contributors to the book *Underdevelopment and Social Movements in Atlantic Canada* Toronto 1979 following precisely this tact act according to the principle that the movement is everything This places the struggle of the people for livelihood where it belongs viz at the centre of economic theory and practice

However these writers version of this approach is silent about long term or final aims Their work actually prioritises t right now over longer term views of the role of time in social historical processes People s deepest desires to see Justice prevail and Injustice sent packing are generally aroused positively by their apparent stand on the side of labour against capital a great deal of hope might well be vested in these stands Has this hope however been misplaced Analysis of these authors collective work from 1979 as the Soviet Union began its final slide to oblivion by invading Afghanistan and its source in theories of regional underdevelopment formulated at the Cold War s height in the late 1950s suggests this may be the case Especially disturbing is the outlook underlying that theory and specifically its extreme pragmatism and welter of contradictions and inconsistencies These disclose a position entirely at odds with the proclaimed mission to establish the truth of matters under investigation In order to maintain a position in what they see as the mainstream today some of these writers have taken matters further adapting to fit the cut of current discourse in the early 2000s some of the concerns raised in the earlier work En route however they make a major concession to the disinformation of the Canadian fisheries department that there are too many fishermen chasing too few fish Disguising the concession as an appeal for ecological sanity in the face of a pending environmental crisis of raw material food supplies during a period of still excessive capitalization in the coastal fishing industry those putting forward this argument decline to challenge the claims by the government and the largest fish processors that the problem at bottom is a shortage of raw material a defect in Nature As however the problem is actually one of how Humanity has arranged its affairs when it comes to extremely fundamental matters like food gathering this concession no less than any of the other more direct attacks on time consciousness and on cognition as a source of reliable information forms part of a far more general and sweeping assault on the very concept of human agency This assault challenges the fundamental notion that no human social problem is without some human social solution The fact of the matter is that the essence of human social agency lies on the path of pursuing knowledge Whosoever would increase knowledge is bound to disturb the status quo but even so a person must increase his knowledge of the truth
