Yoxall, 2017-06-22. I hope the reader may find that this book, though smaller than others on the same subject, is more helpful and even more comprehensive than they are. That it deals with the glass articles which they mention and with others which they omit, that it simplifies and classifies the study and practice of glass collecting more than has been done in print heretofore, and that it can do these things because it is written out of personal knowledge gained from much experience and not from hearsay or from other books. Diffuseness has been avoided, but this, I hope, has enabled me to make the book the more lucid as well as the more succinct. At any rate, it affords hints, general rules, and warnings more numerous and more practical than any published until now. I have also tried to give to it a quality which reviewers have found present in my other books on *Collecting*: that is, a simplicity and clearness of explanation done at the most difficult and necessary points and in an interesting way. Moreover, this book has had the great advantage of revision before printing by Mr. G. F. Collins of 53 The Lanes, Brighton, a pupil of Mr. W. Hartshorne's and well known to all principal collectors of old glass. Most of the illustrations represent typical pieces in my own collection, but for some of the finest, I have to thank the kindness of Mrs. Devitt of Herontye East Grinstead, a collector indeed. The illustrations do not represent relative sizes to the same scale. J. H. YOXALL

Catalog of the Avery Memorial Architectural Library of Columbia University. 2d Ed., Enl Avery Library, Glass Gems Henry Jeffs, Glass represents one of humanity's most remarkable material achievements transforming simple sand into objects of breathtaking beauty and practical utility through the application of intense heat and skilled craftsmanship The story of vintage glassware begins with understanding glass itself as both a scientific phenomenon and an artistic medium where molecular structure and creative vision combine to produce treasures that have captivated collectors for generations The fundamental nature of glass as an amorphous solid gives it unique properties that distinguish it from crystalline materials When silica sand is heated to temperatures exceeding 1700 degrees Fahrenheit its molecular structure transforms into a fluid state that can be shaped colored and manipulated before cooling into its final form This process requires precise control of temperature timing and technique making glassmaking as much an art as a science Ancient civilizations discovered glassmaking techniques that established foundations still used in contemporary production Egyptian glassmakers of 1500 BCE created the first decorative vessels using core forming methods while Roman artisans developed blowing techniques that revolutionized glass production efficiency and design possibilities These early innovations

established glass as both a luxury commodity and a medium for artistic expression creating precedents that would influence glassmaking for millennia The addition of metal oxides to molten glass creates the spectacular color variations that make vintage glassware so visually compelling Cobalt produces deep blues chromium creates emerald greens gold generates ruby reds and silver can produce everything from amber to pale yellow depending on the firing conditions Understanding these chemical relationships helps collectors appreciate the technical mastery required to achieve consistent colors and recognize the significance of rare or unusual hues
