Collective Excitations in Shape-transitional Nuclei Akm Amanullah Khan, 1985 Low-Spin Collective Excitations in Deformed Nuclei, 2000 The 02 level in deformed nuclei has historically been given the label beta even though its properties vary drastically from one nucleus to another By reviewing models from where the original term beta vibration arose and appealing to microscopic calculations guidelines are proposed for the properties of a true beta vibration An examination of available data including B E2 values rho 2 E0 values and single and two nucleon transfer populations shows that very few 02 levels satisfy the criteria for a beta vibration It is suggested that pairing excitations may be playing a dominant role
