templates control and branching variable and parameters sorting and grouping and using modular stylesheets Also examines strings dates and numbers working with multiple documents and text generating identifiers and testing and documentation All topics contain incremental code examples Addresses the much requested processing steps for typical XML document and data vocabularies including how the processing model differs from most programming languages Beginning XSLT and XPath Transforming XML Documents and Data is the essential guide you need to thoroughly understand the important XSLT processing model Note CD ROM DVD and other supplementary materials are not included as part of eBook file
