Behavior And Arteriosclerosis:

Behavior and Arteriosclerosis J. Alan Herd, Stephen M. Weiss, 2012-12-06 During the past decade cardiovascular medicine has made significant strides in the diagnosis and treatment of coronary heart disease and related disorders as well as developing a better understanding of potential preventive risk reducing measures Highly sophisticated diagnostic instrumentation surgical procedures and emergency medical care have undoubtedly contributed greatly to the trend of declining mortality from cardiovascular events In the course of the extensive research efforts associated with this area it has become increasingly apparent that the identified coronary risk factors share the common element of lifestyle as a major determiner of health behaviors associated with these factors Further it is suspected that behavioral and environmental factors may play a significant contributory role toward the etiology and progression of arteriosclerosis through their effects on the central and peripheral nervous systems and associated neurohormonal response Considerable research effort has been devoted to identifying the risks associated with smoking elevated blood pressure and serum cholesterol Research development and modification is being vigorously pursued Behavioral research exploring the role of psychological stress factors social support networks stressful life events and the Type A/B behavior patterns has uncovered potentially meaningful associations between behavioral factors and arteriosclerosis as discussed in the succeeding chapters of this book

Behavioral Aspects of Cardiovascular Disease Alvin P. Shapiro, Andrew S. Baum, Andrew S. Baum, 2014-05-12 Smoking diet stress coping and exercise among other behaviors and psychological states are now clearly implicated in the development of cardiovascular diseases Prevention based largely on altering behaviors that contribute to this chronic disease is now as important a goal as is treatment of those already afflicted This volume based on a recent meeting of the Academy of Behavioral Medicine Research addresses several important areas of research in the general area of cardiovascular disease The topics covered reflect on important aspects of this phenomenon such as the long term development of coronary artery disease central nervous system CNS regulation of blood pressure heart rate and sympathetic tone playing a pivotal role in sympathetic activity and hypertension learned blood pressure modulation and baroreceptor activation as a means of reducing the aversiveness of stress or noxious stimulation and the notion that symptoms of heart disease or infarction may occur in the absence of organic heart disease Having been impressed by the recent advances in the field the editors of this book capture the wealth of newly acquired knowledge about behavioral factors in cardiovascular disease and how the body's nervous endocrine and cardiovascular systems work together Verbal Behavior Burrhus Frederic Skinner, 1957
